Discovering Tut

LECTURE-2

ENGLISH

HUSSAIN SIR

Topics To Covered

- 1 ... Lec. 2. *Discovering Tut: The Saga Continuous.*
- 2 ... Part 2
- 3 ...
- 4 ...

Discovering Tut: the Saga Continues *A.R. Williams*

"The mummy is in very bad condition because of what Carter did in the 1920s," said Zahi Hawass, Secretary General of Egypt's Supreme Council of Antiquities, as he leaned over the body for a long first look. Carter-Howard Carter, that is - was the British archaeologist who in 1922 discovered Tut's tomb after years of futile searching. Its contents^{things}, though hastily ransacked in antiquity, were surprisingly complete. They remain the richest royal collection ever found and have become part of the pharaoh's legend^{story}. Stunning artefacts in gold, their eternal brilliance meant to guarantee resurrection^{ensure life after death}, caused a sensation at the time of the discovery and still get the most attention. But Tut was also buried with everyday things he'd want in the afterlife: board games, a bronze razor, linen undergarments, cases of food and wine.

Archaeologist: A person who studies ancient cultures through artifacts

Futile:: incapable of producing the results:

Hastily: swiftly

Antiquity: oldness, past

Artefacts: Historical objects resurrection: restoration to life

Discovering Tut: the Saga Continues *A.R. Williams*

After months of carefully recording the pharaoh's funerary treasures, Carter began investigating his three nested coffins. Opening the first, he found a shroud adorned with garlands of ^{type of tree} willow and olive leaves, ^{a type of tree} wild celery, lotus petals, and cornflowers, the faded evidence of a burial in March or April. When he finally reached the mummy, though, he ^{faced difficulty} ran into trouble. The ritual resins had ^{became solid} hardened, cementing Tut to the bottom of his solid gold coffin. "No amount of legitimate force could move them," Carter wrote later. "What was to be done?"

Funerary treasures: The valuable things with which the king was buried

Legitimate: Reasonable

Resins: sticky substances

Discovering Tut: the Saga Continues *A.R. Williams*

The sun can beat down like a hammer this far south in Egypt, and Carter tried to use it to loosen the resins. For several hours he set the mummy outside in blazing sunshine that heated it to 149 degrees Fahrenheit. Nothing ^{moved} budged. He reported with scientific detachment that "the ^{hardened} consolidated material had to be chiselled away from beneath the limbs and trunk before it was possible to raise the king's remains."

Blazing: very hot

Budged: moved, shifted

Chiselled away: to cut something with a chisel

Discovering Tut: the Saga Continues *A.R. Williams*

In his defence, Carter really had little choice. If he hadn't cut the mummy free, thieves most certainly would have circumvented the guards and ripped it apart to remove the gold. In Tut's time the royals were fabulously wealthy, and they thought or hoped they could take their riches with them. For his journey to the great beyond, King Tut was lavished with glittering goods: precious collars, inlaid necklaces and bracelets, rings, amulets, a ceremonial apron, sandals, sheaths for his fingers and toes, and the now iconic inner coffin and mask all of pure gold. To separate Tut from his adornments, Carter's men removed the mummy's head and severed ^{Cut off} nearly every major joint. Once they had finished, they reassembled the remains on a layer of sand in a wooden box with padding that concealed the damage, the bed where Tut now rests.

Circumvented: find a way around

Inlaid: decorated with a design set into the surface.

Adornments: ornaments concealed: hid

QUESTION

Who discovered Tut's tomb?

- 1 Mark Antony
- 2 Lord Carnarvon
- 3 Howard Carter
- 4 A. R. Williams

QUESTION

What did Howard Carter face difficulty with while examining Tut's mummy?

- 1 The tomb was dark
- 2 The body was stuck to the bottom of the coffin
- 3 There were too many guards
- 4 He couldn't find the tomb

QUESTION

What do the funerary treasures found in Tut's tomb suggest?

- 1 He was poor
- 2 Egyptians believed in an afterlife
- 3 Tut was a slave
- 4 They wanted to bribe the gods

Discovering Tut: the Saga Continues *A.R. Williams*

Archaeology has changed substantially in the intervening decades, focusing less on treasure ^{wealth} and more on the fascinating details of life and intriguing mysteries of death. It also uses more ^{advanced} sophisticated tools, including medical technology. In 1968, more than 40 years after Carter's discovery, an anatomy professor X-rayed the mummy and revealed a startling fact: beneath the resin that cakes his chest, his breast-bone and front ribs are missing.

Sophisticated tools" refers to instruments, devices, or methods that are advanced, complex, and highly developed compared to simpler alternatives.

Anatomy: study of body structure

Startling: unexpected, surprising

Substantially: to a great extent

Intriguing: Fascinating; arousing curiosity

Intervening: occurring b/w events

Discovering Tut: the Saga Continues *A.R. Williams*

Today diagnostic imaging can be done with computed tomography, or CT, by which hundreds of X-rays in cross section are put together like slices of bread to create a three-dimensional virtual body. What more would a CT scan reveal of Tut than the X-ray? And could it answer two of the biggest questions still lingering about him how did he die, and how old was he at the time of his death? →

King Tut's ^{death} demise was a big event, even by royal standards. He was the last of his family's line, and his funeral was the death rattle of a dynasty. But the particulars of his passing away and its aftermath are unclear.

Death rattle: the indication of the end of the dynasty
