Locomotion and
Movement

LECTURE- 5

Zoology

Dr Adil Altaf sir

Topics To Be Covered

1 Skeletal System Part 2

Human Skeletal System

Adult - 206 Bones

Axial Skeleton 80

Appendicular 126

Axial Skeleton.

Tear Gland - Lacrimal Gland.

① Skull → It has 22 Bones.

→ 8 in Cranium, 14 in Facial part.

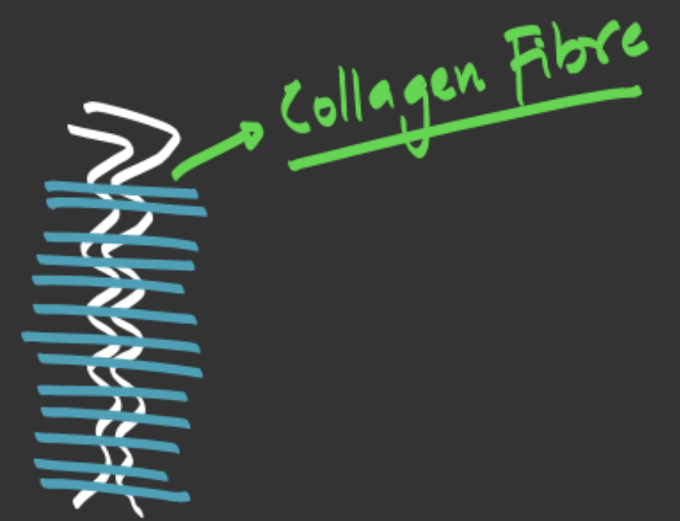

Dicondylic
- Two occipital
condyl.

- Frontal (1)
- Temporal (2)
- Parietal (2)
- Occipital (1) [Foramen Magnum + Occipital condyl²]
- Sphenoid (1) [sella turcica].
↓
cavity in which
Pituitary Gland is present.
- Ethmoid. (1)

- Mandible (1) (lower jaw)
- Maxilla (2) (upper jaw)
- Nasal (2) (Nose)
- Zygomatic (2) (cheek)
- Lacrimal (2) (Tear glands)
- Inferior Nasal (2) (Inner to Nose)
- Palatine (2) (upper side of oral cavity)
- Vomer (1) [Towards Inner side]

→ Joint Between Skull Bones is Fibrous joint
- Immovable joint
Also klas- Suture

→ Movable joint (Synovial Joints)
→ Temporomandibular joint (TMJ)

→ Skull Also Contains, 6 Ear Ossicles, 1 Hyoid Bone.

→ Ear Ossicles are located in Middle Ear.

· 3 in each Ear

Name - Malleus (Hammer Shaped)
(MIS) - Incus (Stirrup Shaped)

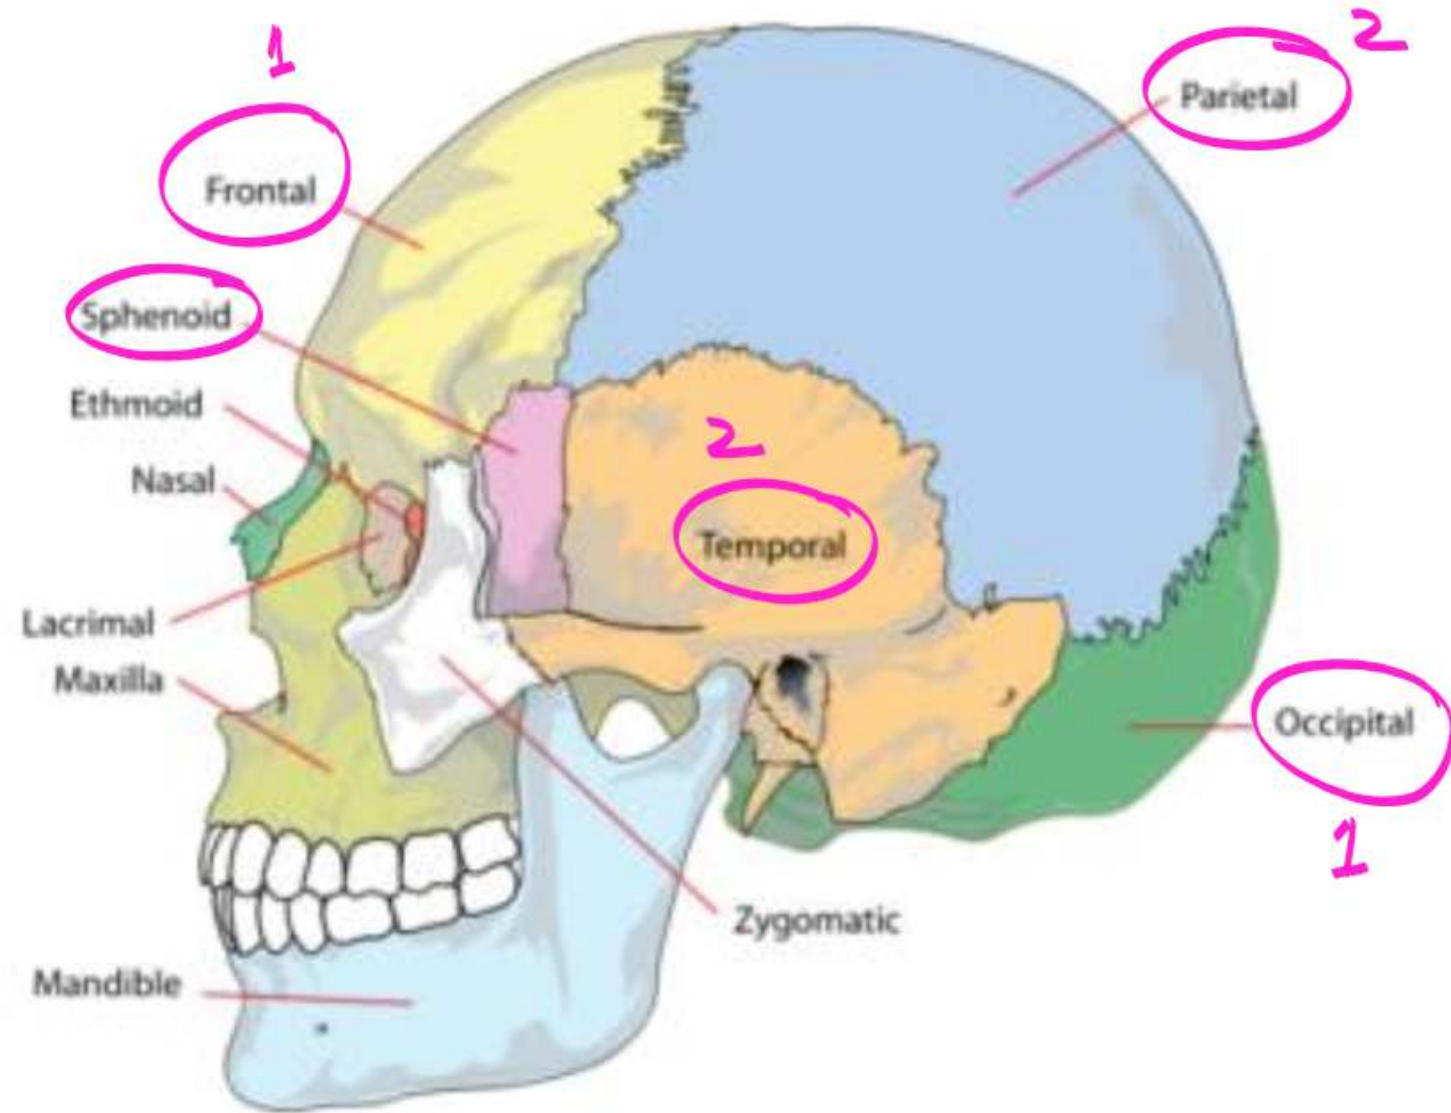

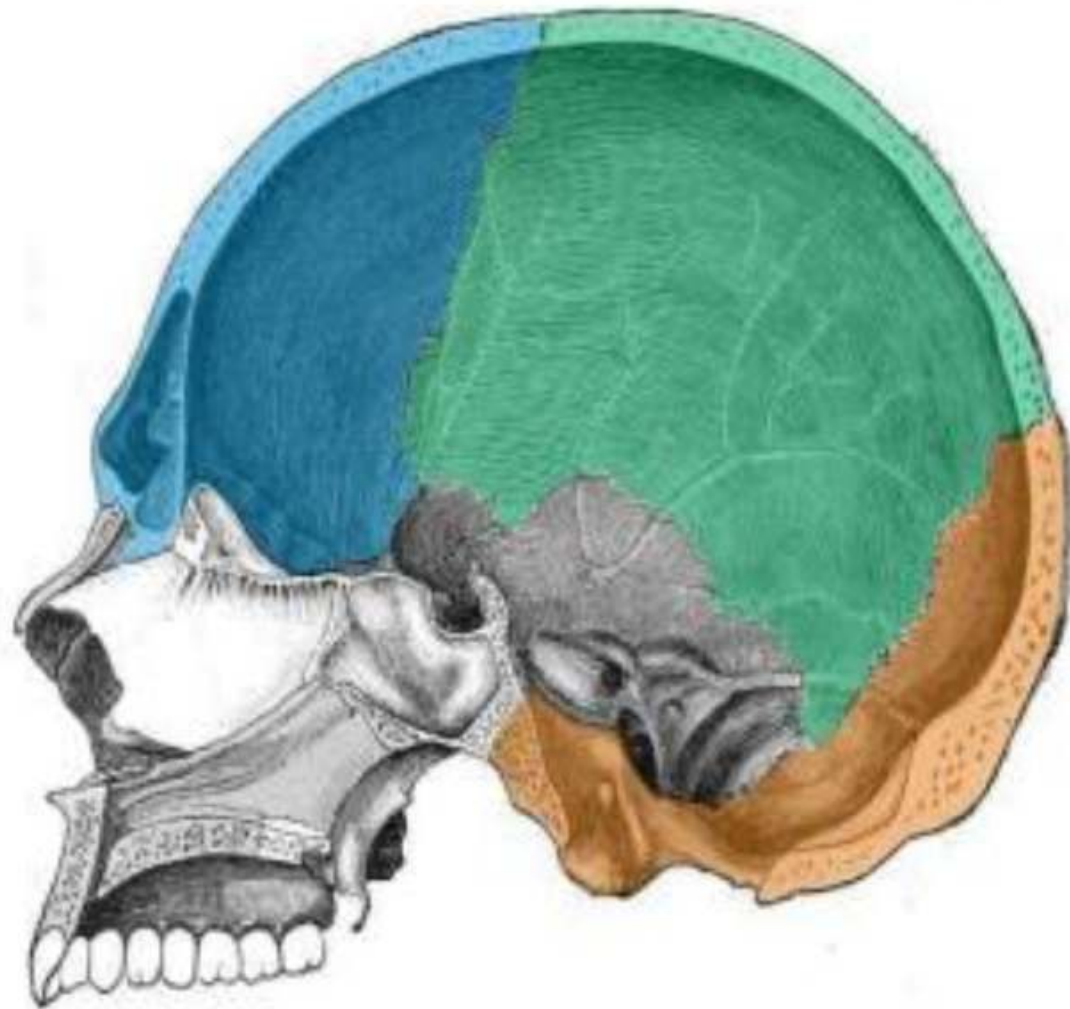

- Stapes (Anvil Shape).

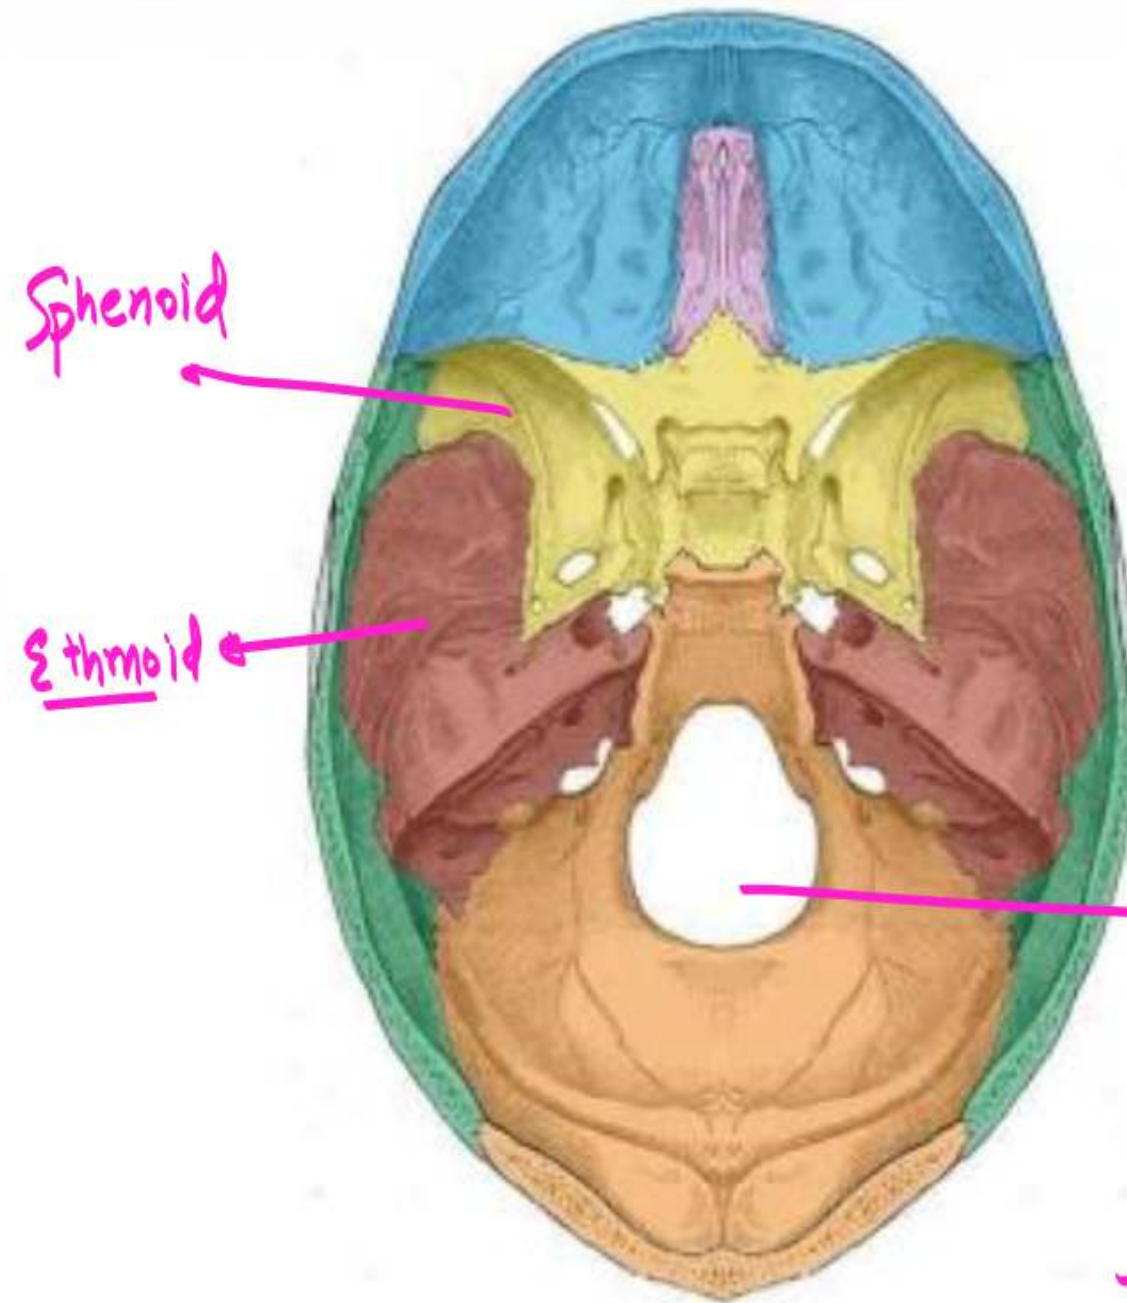

→ Smallest Bone of Body.

Therefore, Skull has $22 + 6 + 1 = 29$ Bones Actually

a) Bones of the calvarium

b) Bones of the cranial base

- Frontal
- Sphenoid
- Temporal
- Parietal
- Occipital
- Ethmoid

→ Foramen
Magnum
- (Largest Foramen)
of Skull
- Through it Spinal
cord passes.

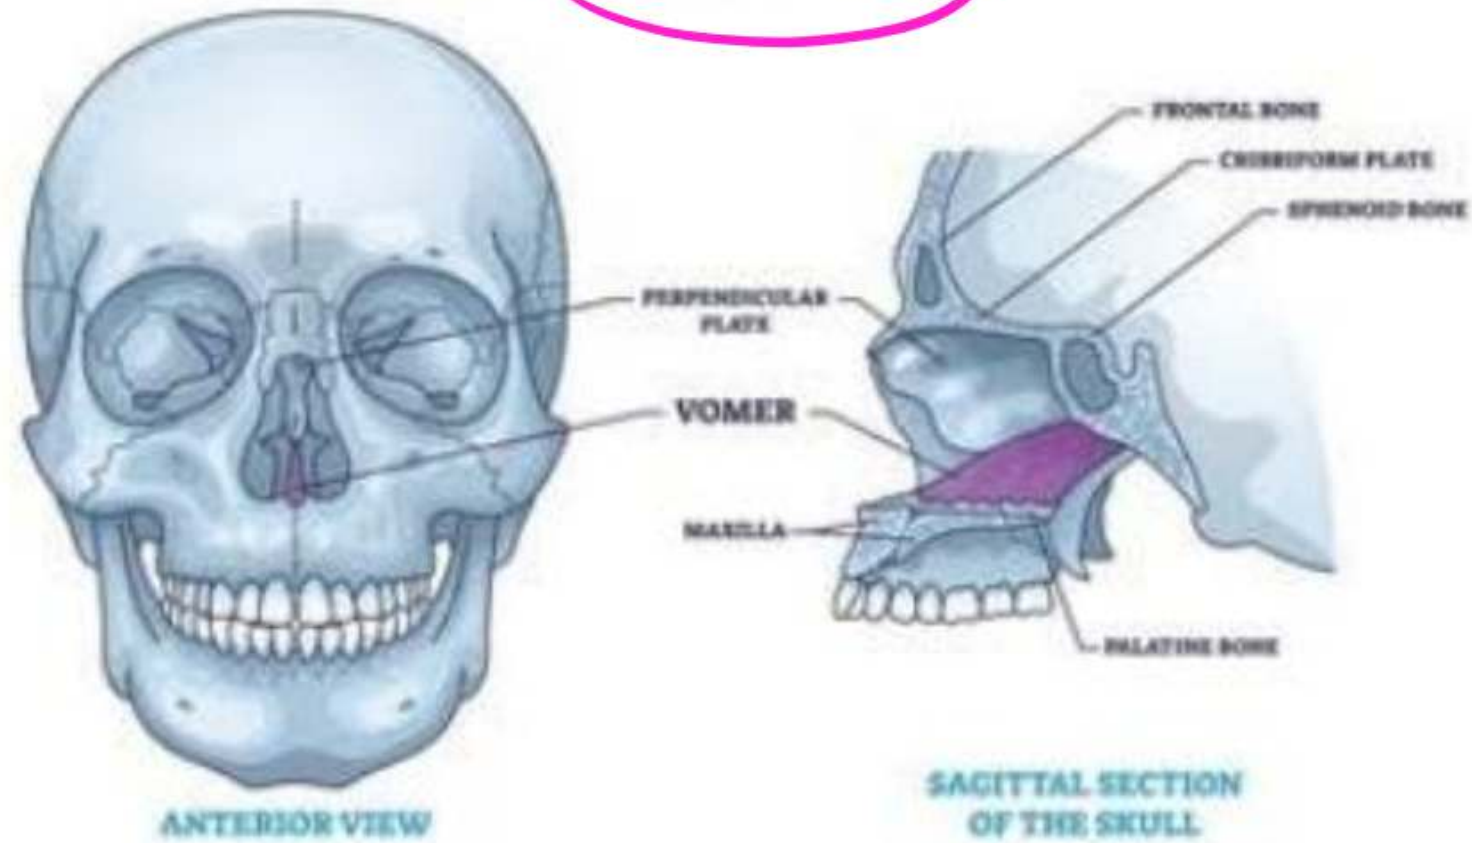

Axial Skeletal

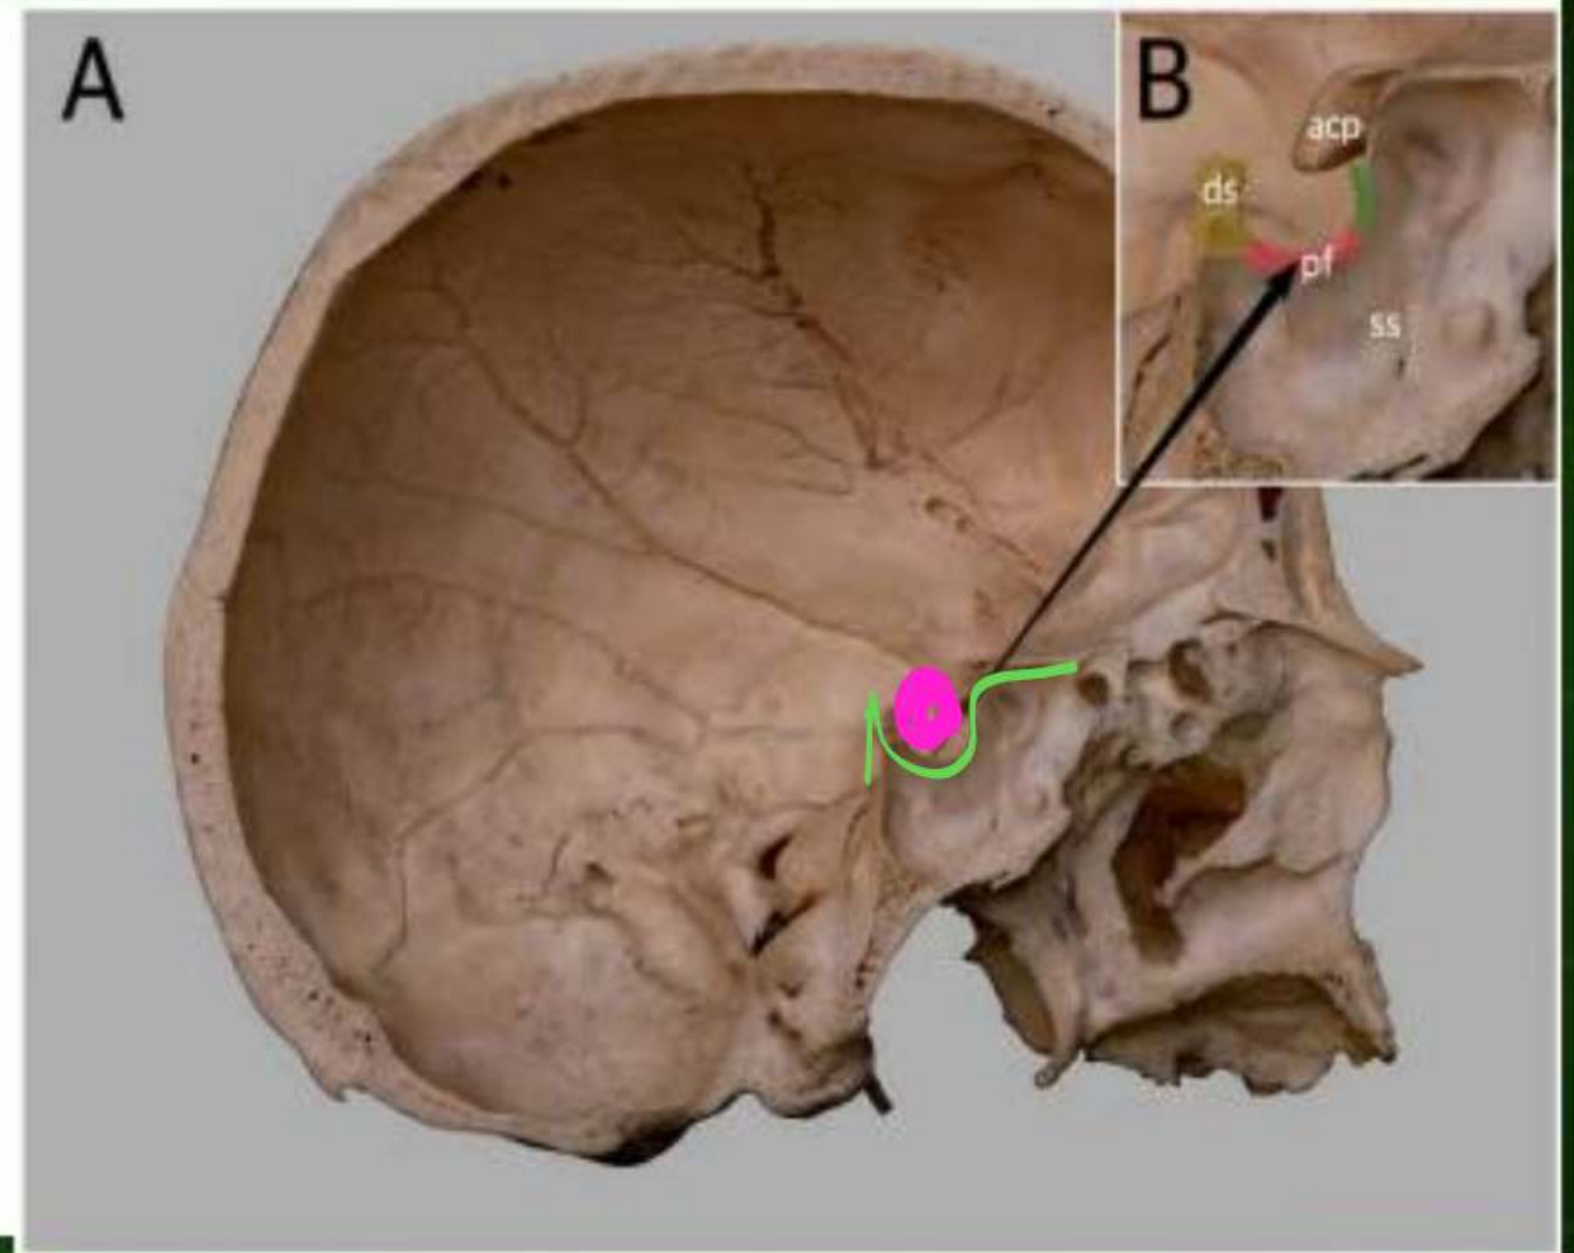

Appendicular Skeletal

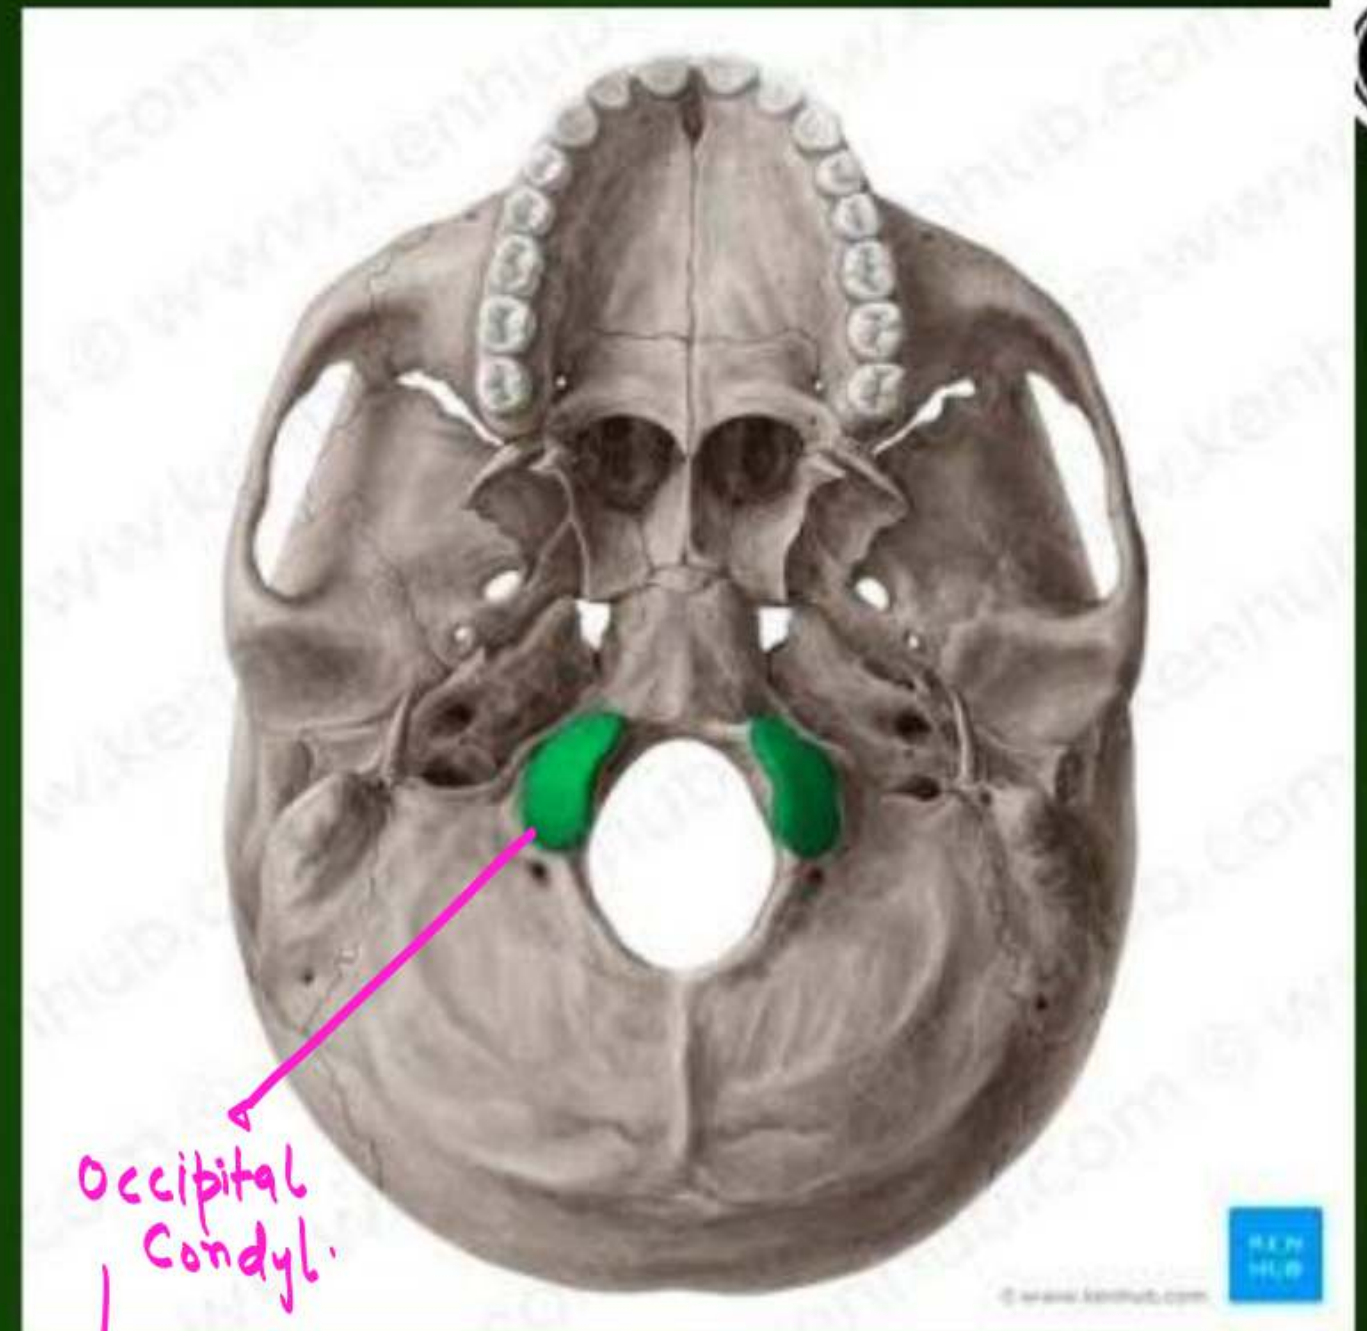

VOMER

shutterstock.com · 2189223763

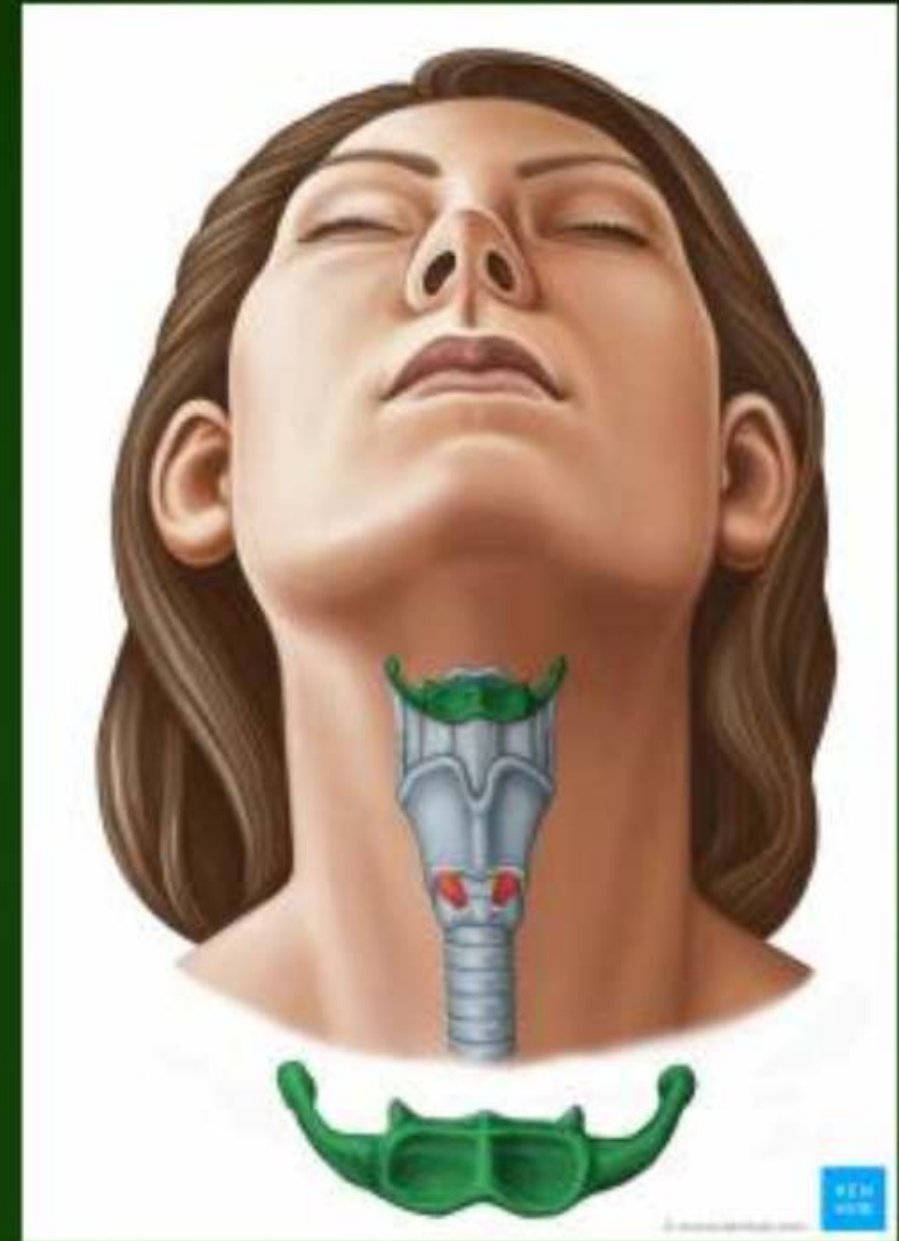

Forms Condylar joint with C_1 (Atlas) vertebra.

→ Hyoid

- Horse Shoe Shaped
- Lower to Buccal Cavity

- Only Bone in the Body, which is not in contact with any other Bone.

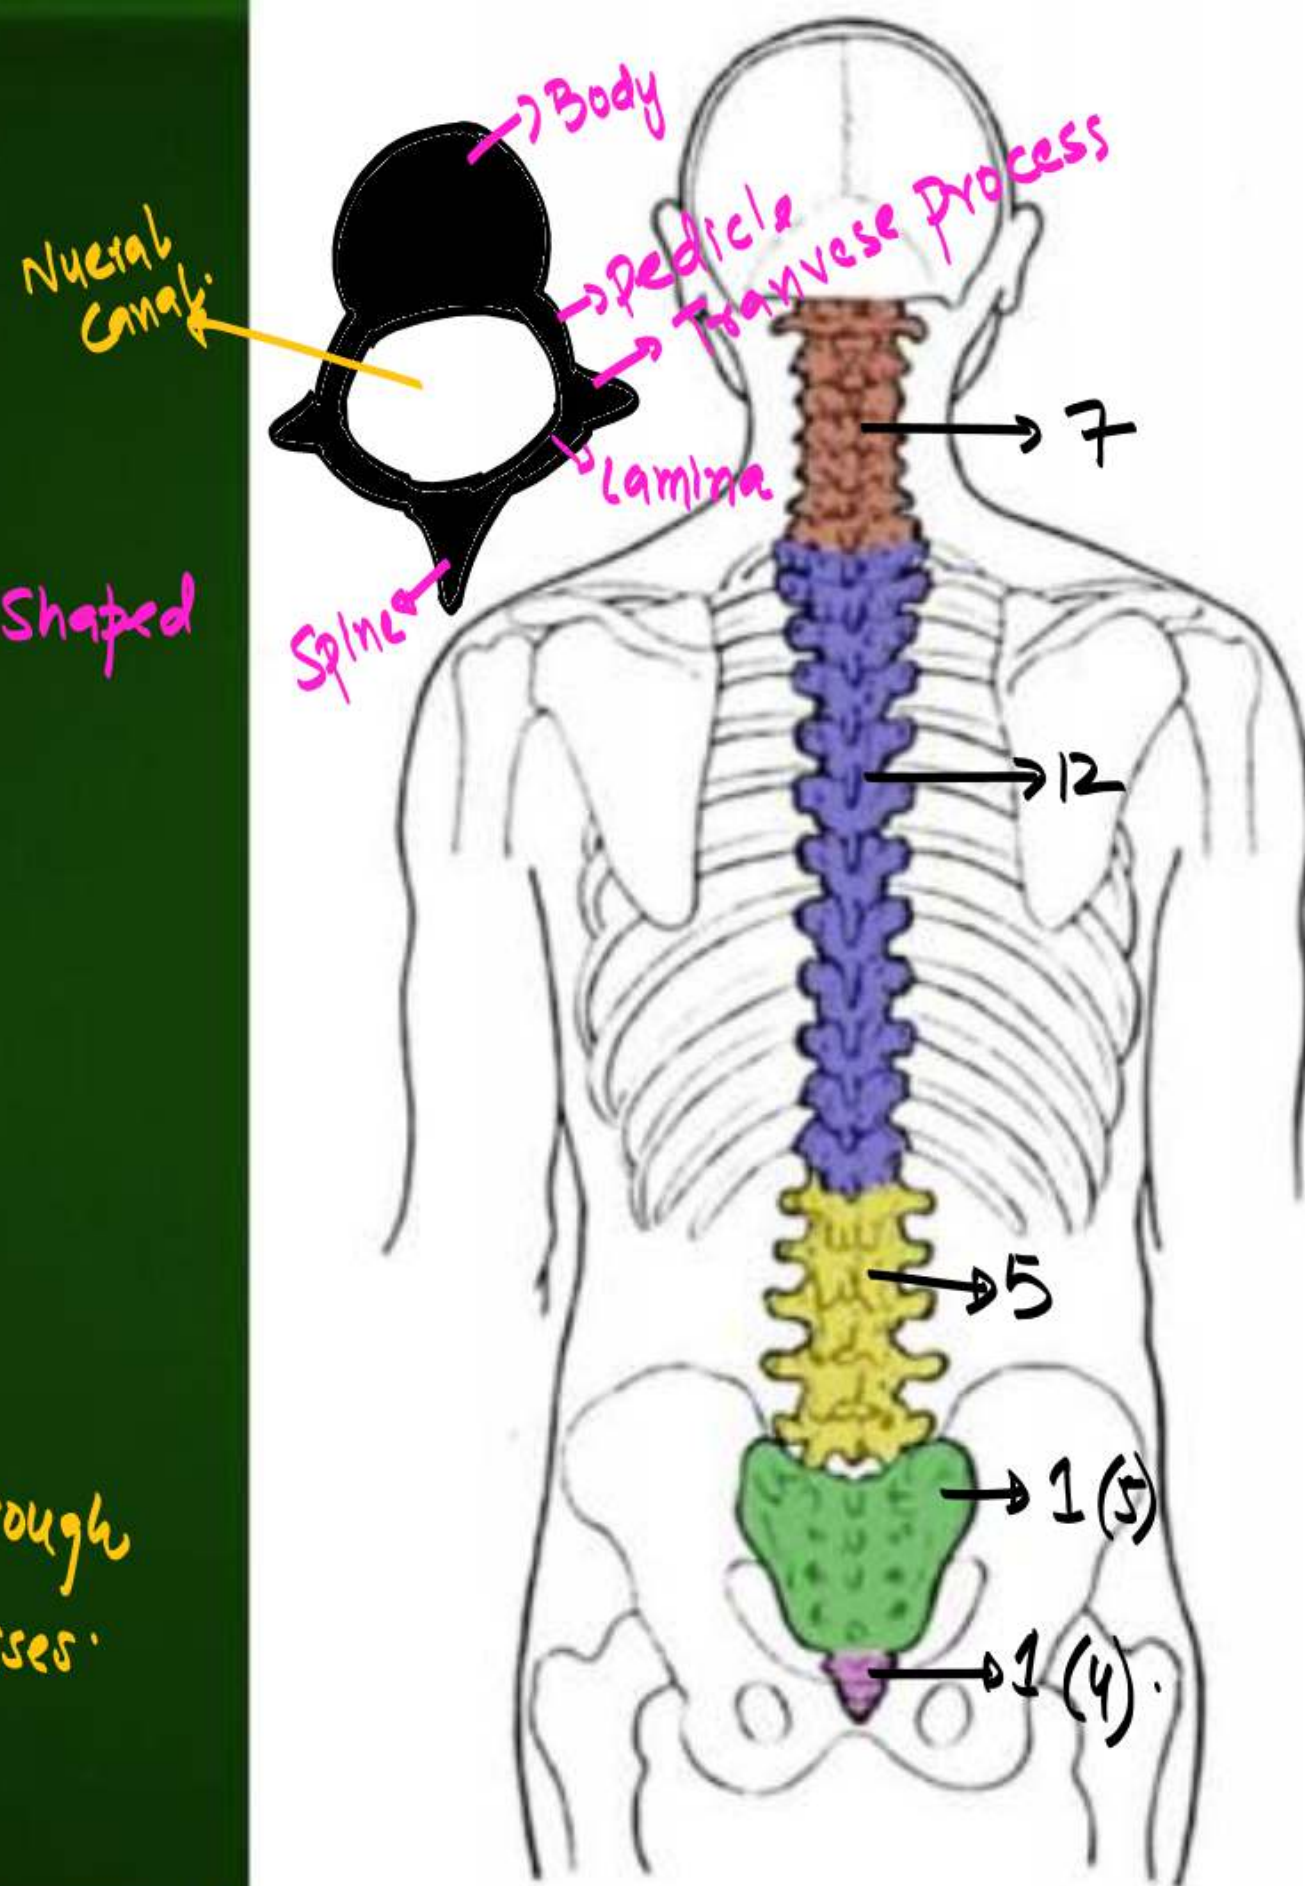

② Vertebral Column klas - Backbone

→ It has 26 Bones which are Irregular Shaped klas vertebrae.

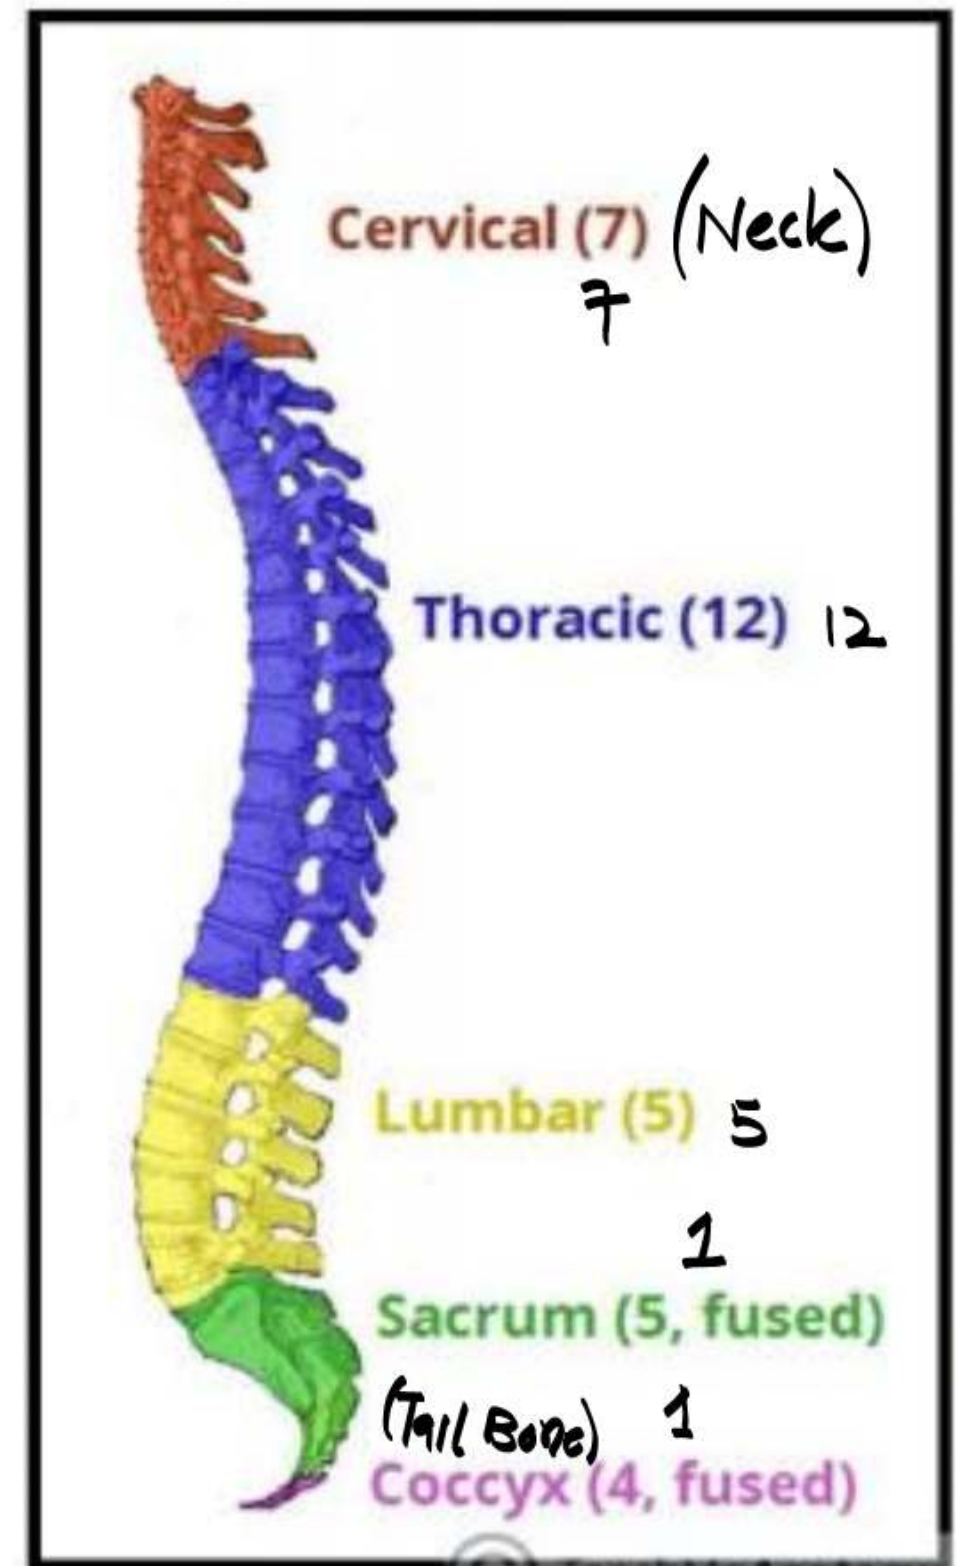

- Cervical (7)
- Thoracic (12)
- Lumbar (5)
- Sacral (5 → 1)
- Coccyx (4 → 1)

→ They have a neural canal, through which spinal cord passes.

H/W - Curves of V. Column

26 Bones
