

BAAZ & UDAY JKBOSE

2026 CLASS 11TH

STRUCTURAL ORGANISATION IN ANIMALS

LECTURE-4

ZOOLOGY

DAVOOD SIR (CEO of NG)

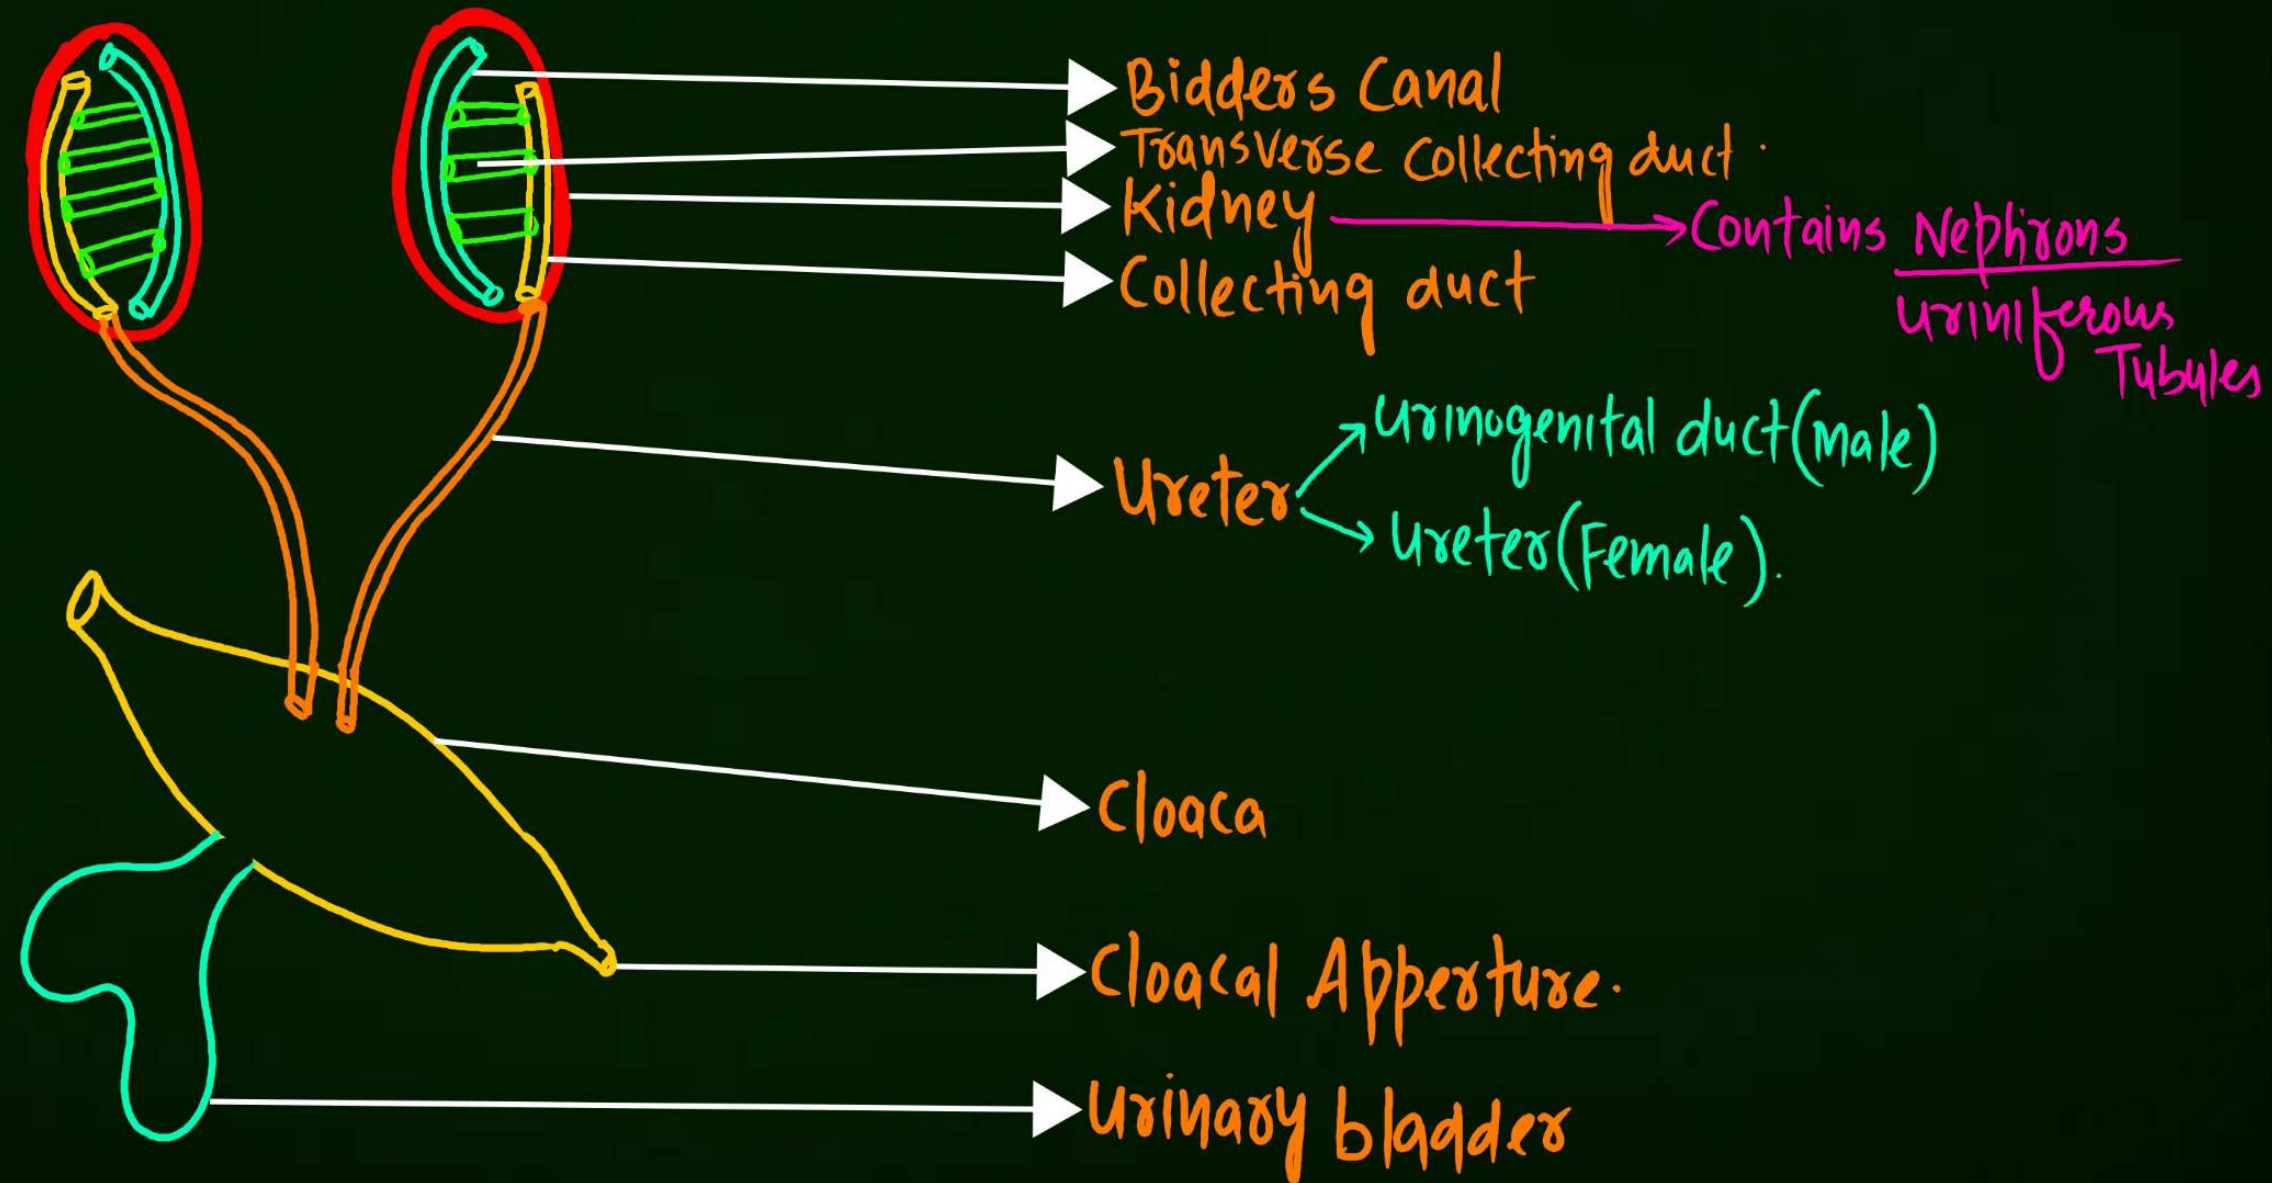

Physics Wallah

Topics To Be Covered

- 1 **EXCRETORY SYSTEM OF A FROG**
- 2 **REPRODUCTIVE SYSTEM OF A FROG**
- 3 **FERTILIZATION & DEVELOPMENT (FROG)**
- 4 **PREVIOUS YEAR NEET MCQ'S**

Anatomy of frog.
(D.S) (R.S) (T.S) (C.S)

Excretory system of a Frog

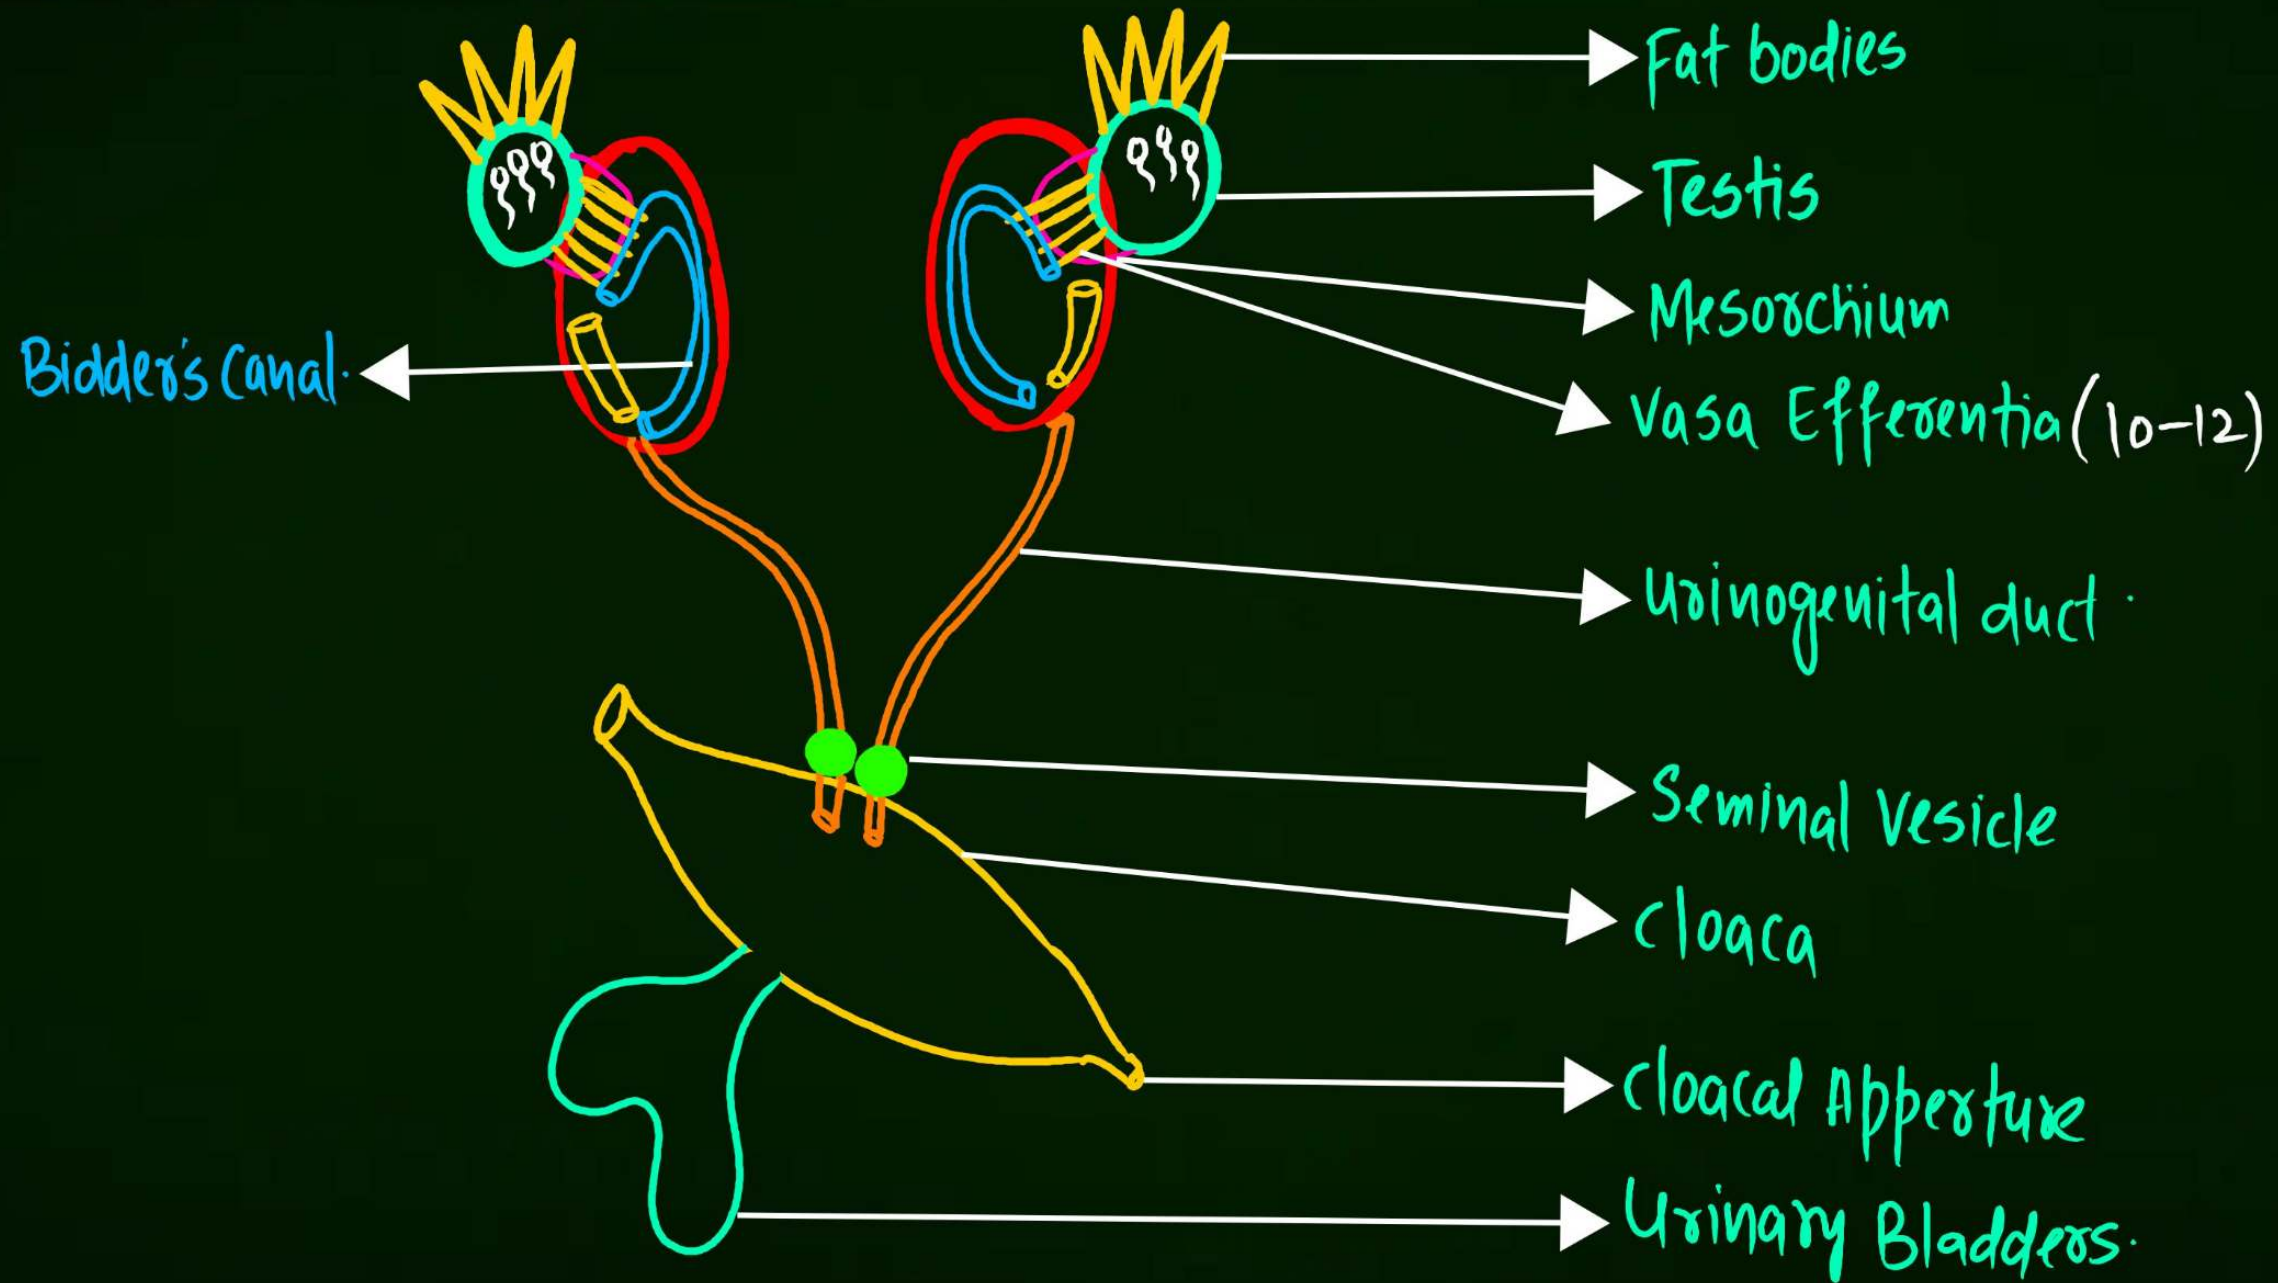

Excretory system of a Frog

• It includes

- ① pair of kidneys.
- ② pair of ureters
- ③ cloaca.
- ④ urinary bladder

- Frogs excretory product is urea (ureotelic Animal).
- Kidney have functional units called Nephrons/uriniferous tubules which filter blood & forms urine
- Two ureters emerge from both the kidneys. In males ureter is called urinogenital tract.
- Ureters opens in cloaca and pour urine in it.
- Urinary bladder which stores urine opens in cloaca and the urine is passed through cloacal Aperture.

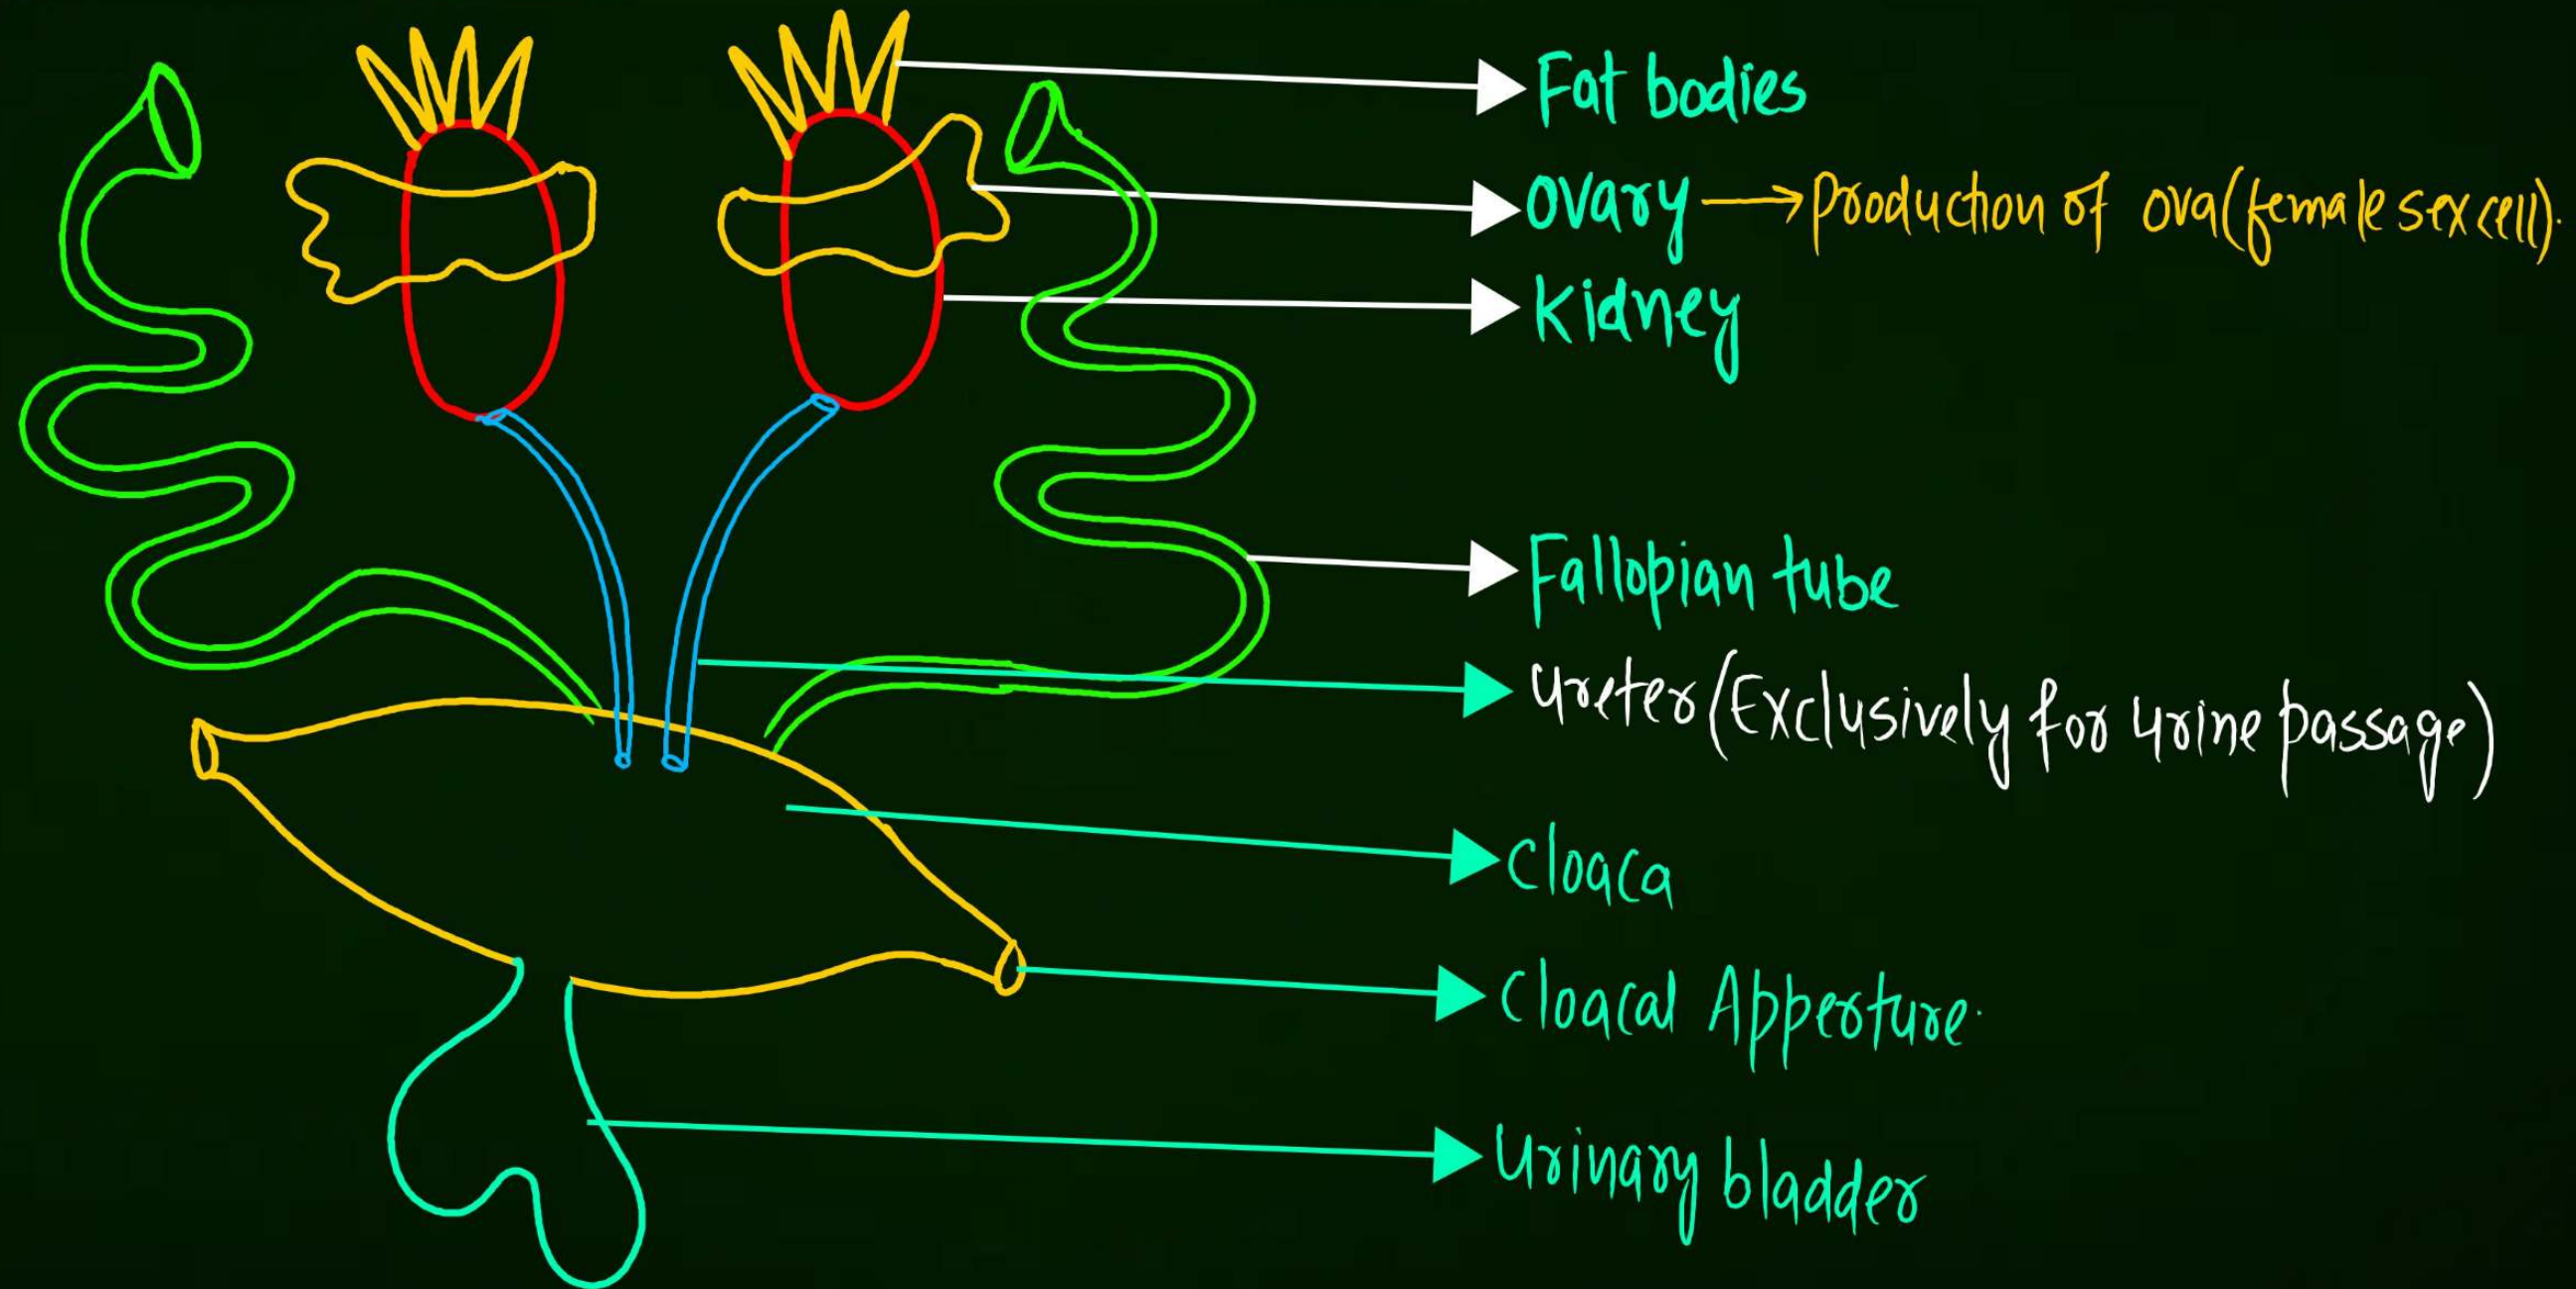

Male Reproductive system of a Frog

Male Reproductive system of a Frog

- Male Reproductive system includes a pair of Testis (Yellowish colour) attached with Kidney's by Mesorchium.
- 10-12 vasa efferentia arise from Testis and enter into Kidneys then open into Bidder's Canal.
- Bidder's Canal connects to the collecting duct and the collecting ducts pour's sperms into Urogenital duct which opens into Cloaca.
- Sperms are ejected from cloacal aperture during clasping

Female Reproductive system of a Frog

Female Reproductive system of a Frog

- ✓ Female reproductive organs include a pair of ovaries near the kidneys.
- ✓ A pair of oviducts arise from ovaries and open separately into the cloaca.
- ✓ Mature female frog lays 2500–3000 ova at a time.
- ✓ Fertilisation is external, occurring in water.
- ✓ Development includes a larval stage called tadpole which undergoes metamorphosis to become an adult frog.

Fertilization & Development in Frogs

- Fertilization is external (in H_2O)
- Development is indirect which includes larval stage called Tadpole which undergoes metamorphosis
↓
indirect growth
to become adult Frog.

Ecological Importance of a Frog

- ① Frog eats insects and protects the crops.
- ② the muscular legs are used as food by humans in some countries.
- ③ Frogs are an important link in food chain & food web & maintains ecological balance.
