

BAAZ & UDAY JKBOSE

2026 CLASS 11TH

ANIMAL KINGDOM

LECTURE-6

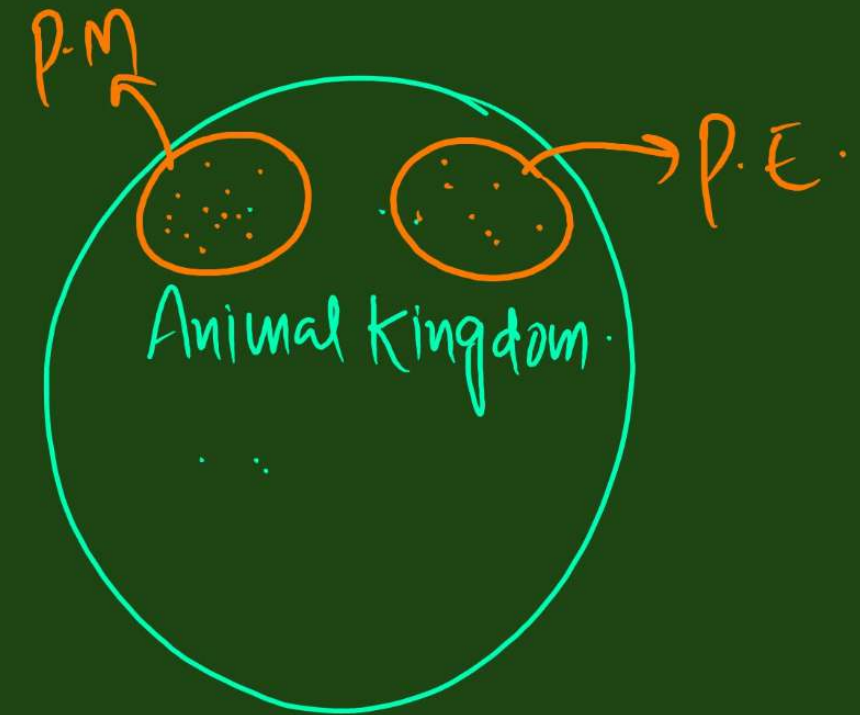

ZOOLOGY

DAVOOD SIR (CEO of NG)

Topics To Be Covered

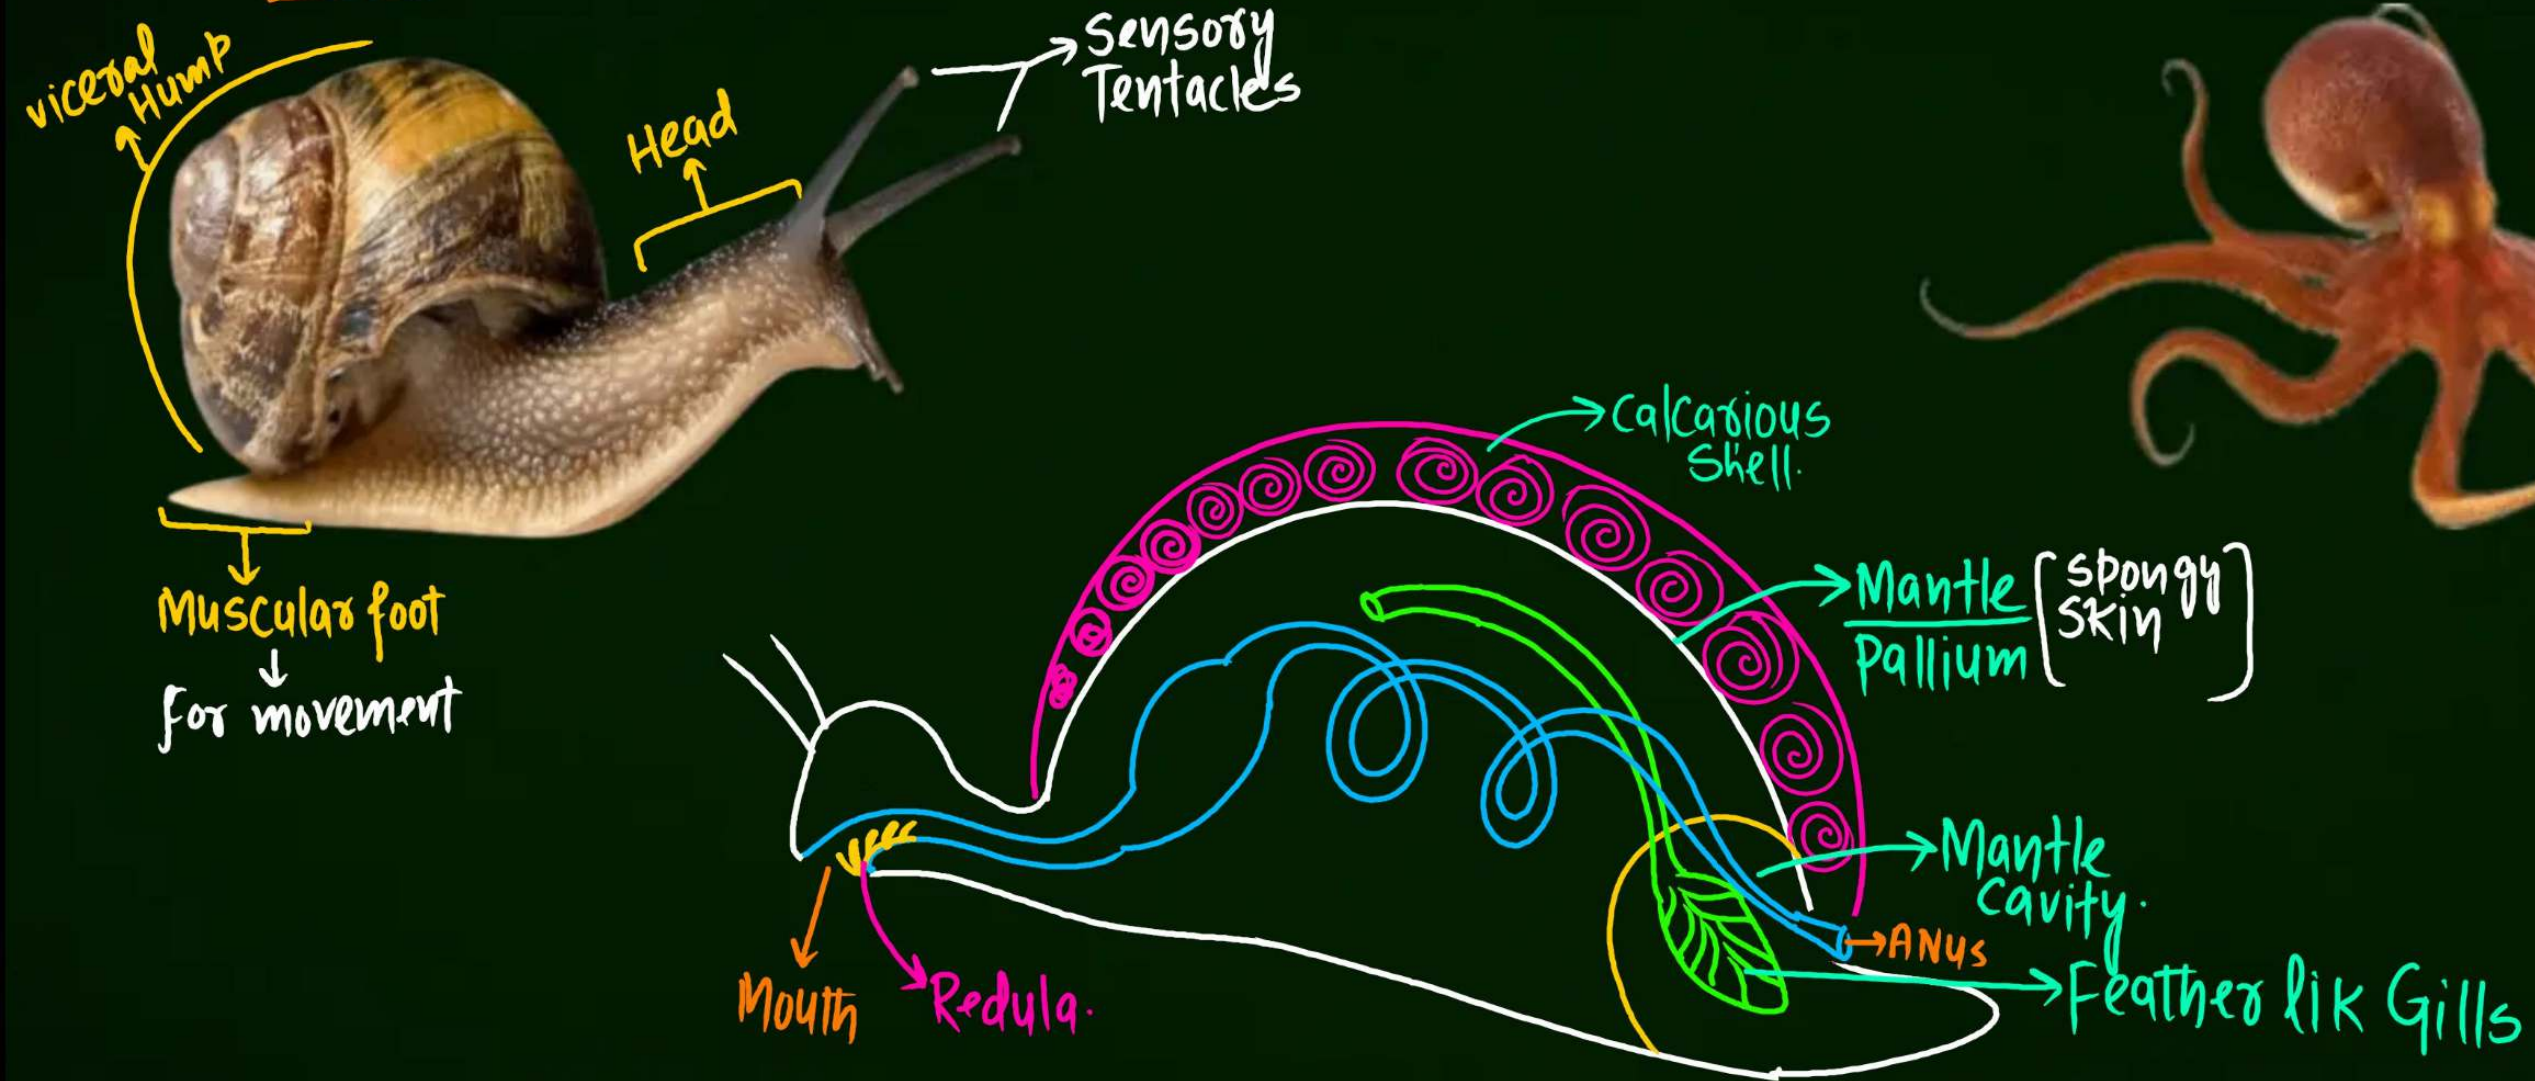

- 1 **Phylum Mollusca**
- 2 **Phylum Echinodermata**
- 3 **Previous Year NEET MCQ's**

Phylum Mollusca (Soft-bodied animals)

Snail

octopus

Phylum Mollusca (Soft-bodied animals)

↳ Second Largest phylum.

Habitat:- Both Aquatic + Terrestrial.

Body features: Bilateral symmetry, Triploblastic, Coelomates, Unsegmented, Organ system level of organization.

Body Features:- → Body is covered by Calcareous shell (calcium carbonate)
↳ Body is divided into three parts:

- Head:-** → Contains Sensory Tentacles.
- Muscular foot:-** → For Movement
- Visceral hump:-** → Contains internal organs

Beneath Calcareous shell is present a spongy skin called Mantle/Pallium which covers visceral Hump. The cavity present b/w Mantle and visceral Hump is called Mantle cavity which contains feathery like Gills for Respiration as well as excretion.

Digestive system:- Complete digestive system and Mouth has a file like organ called Radula used for Grasping food.

Reproduction:- Mostly dioecious & oviparous with Indirect growth.

Phylum Mollusca (Soft-bodied animals)

Examples of Molluscs:

Pila (Apple snail), Pinctada (Pearl oyster), Sepia (Cuttlefish), Loligo (Squid),
Octopus (Devil fish), Aplysia (Sea hare), Dentalium (Tusk shell), Chaetopleura (Chiton)

UNIQUE FEATURES:-

- a) Soft, unsegmented body ✓
- b) Mantle present ✓
- c) Muscular foot for movement ✓
- d) Radula present ✓

Phylum Mollusca (Mnemonic)

"Some Beautiful Creatures Make Very Rare Magic Gifts Daily On Occasions."

Some → Soft-bodied

Beautiful → Bilateral symmetry

Creatures → Coelomate

Make → Muscular foot (movement)

Very → Visceral hump

Rare → Radula (for feeding)

Magic → Mantle (covers hump)

Gifts → Gills in mantle cavity (for respiration & excretion)

Daily → Dioecious (separate sexes)

On → Oviparous (egg-laying)

Occasions → Indirect development

Kaun Banayga Nabkaar: NEET-2019

Match List I with List II.

List I		List II	
(A)	Pila	(i)	Flame cells
(B)	Bombyx	(ii)	Comb plates
(C)	Pleurobrachia	(iii)	Radula
(D)	Taenia	(iv)	Malpighian tubules

Choose the correct answer from the options given below.

~~A~~ A(iii), B(ii), C(iv), D(i)

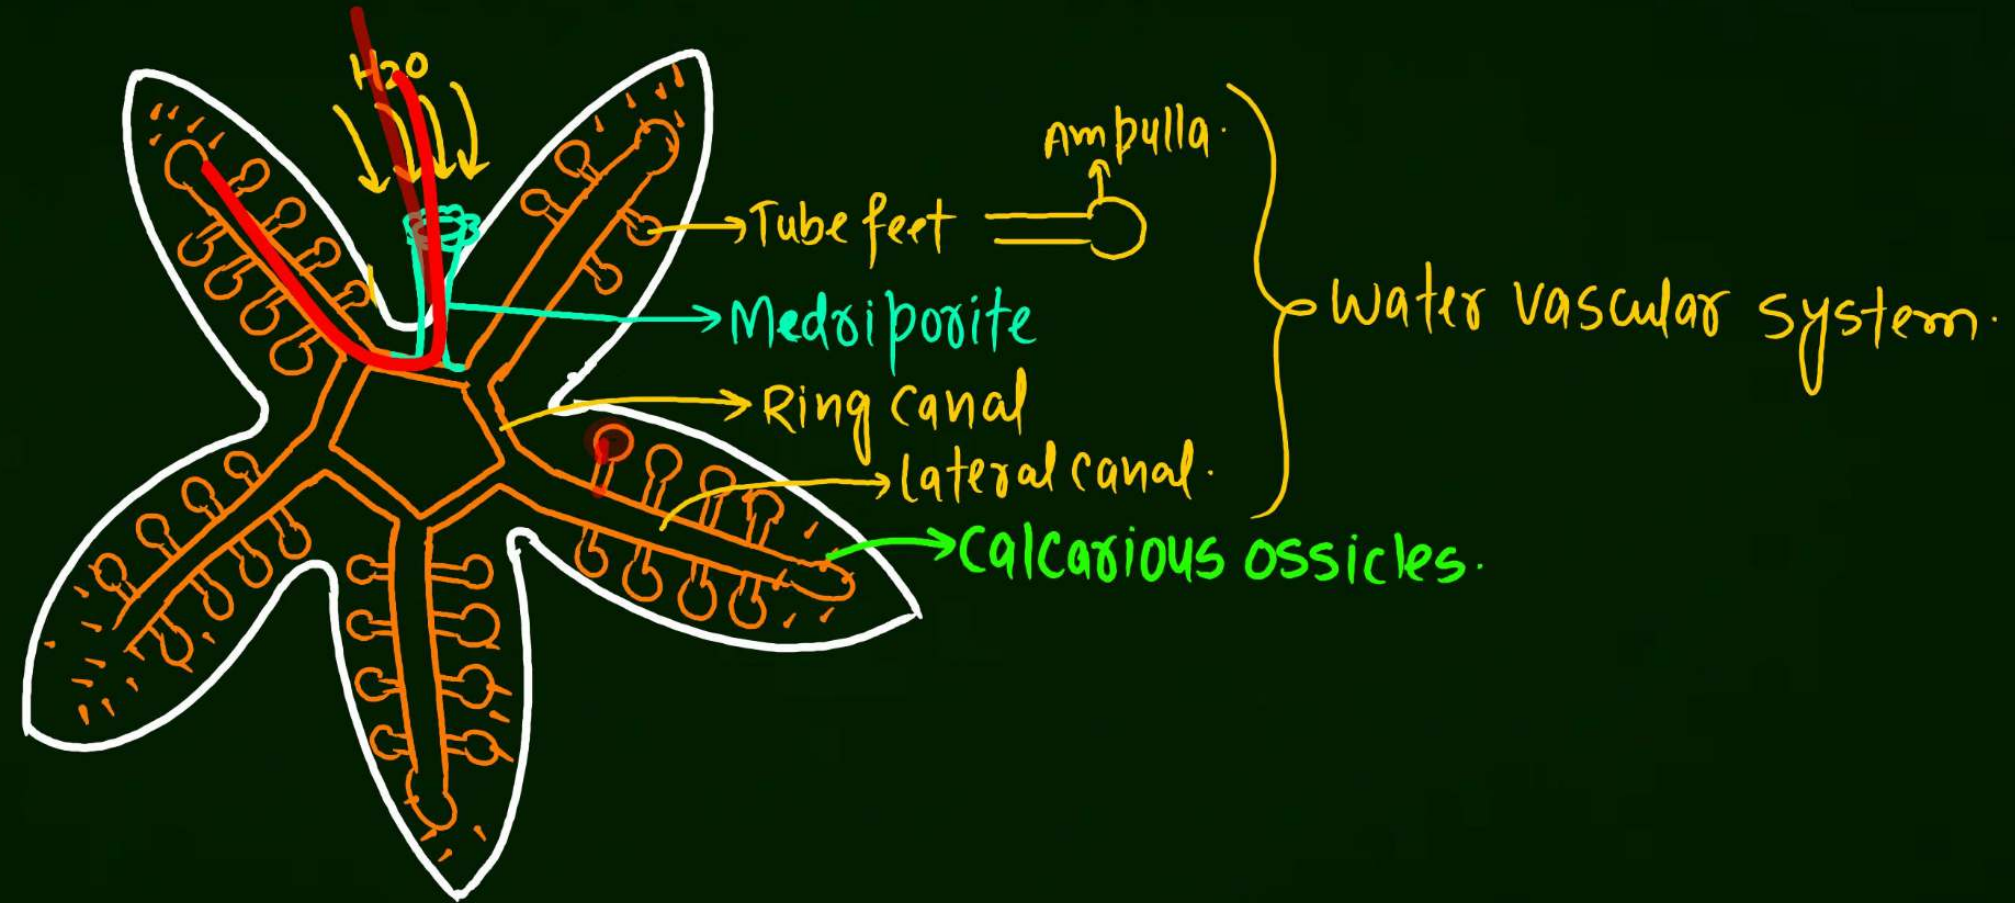

~~B~~ A(iii), B(ii), C(i), D(iv)

~~C~~ A(iii), B(iv), C(ii), D(i)

~~D~~ A(ii), B(iv), C(iii), D(i)

Phylum Echinodermata (Spiny bodied animals)

Phylum Echinodermata (Spiny bodied animals)

Habitat: Exclusively Marine

Body features:-

- ↳ their Larvae have Bilateral symmetry but adults have Radial symmetry.
- ↳ Triploblastic and Coelomates
- ↳ Organ System level of organisation.

Body Structure:- Posses an endoskeleton made of Calcareous ossicles gives a spiny texture.

Digestive System:- Mouth is present ventrally (Lower side) and anus is present Dorsally (upper side).

Excretory System:- No excretory organs

Reproductive System:- Diecious with external fertilization and Shows metamorphosis.

Examples: *Sterias* (Starfish), *Echinus* (Sea urchin), *Antedon* (Sea lily)
Cucumaria (Sea cucumber), *Ophiura* (Brittle star).

Unique Feature:

- ① ↳ they have water vascular system which is a network of fluid filled canals that help in: Locomotion, Respiration, Capturing food.
- ② Spiny skin.

Kaun Banayga Nabkaar: NEET-2020

Match List I with List II.

List I

- (A) Gregarious, polyphagous pest
- (B) Adult with radial symmetry and larva with bilateral symmetry
- (C) Book lungs
- (D) Bioluminescence

List II

- (i) Asterias
- (ii) Scorpion
- (iii) Ctenoplana
- (iv) Locusta

Choose the correct answer from the options given below.

- ☒ **A** A(i), B(iii), C(ii), D(iv)
- ☒ **B** A(iv), B(i), C(ii), D(iii)
- ☒ **C** A(iii), B(ii), C(i), D(iv)
- ☒ **D** A(ii), B(i), C(iii), D(iv)

Thank
You
