

BAAZ & UDAY JKBOSE

2026 CLASS 11TH

ANIMAL KINGDOM

LECTURE-8

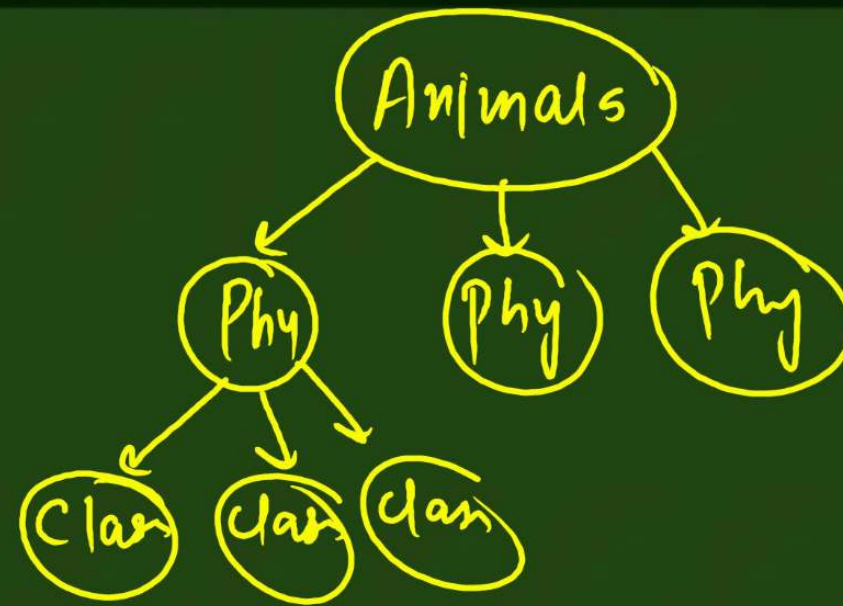

ZOOLOGY

DAVOOD SIR (CEO of NG)

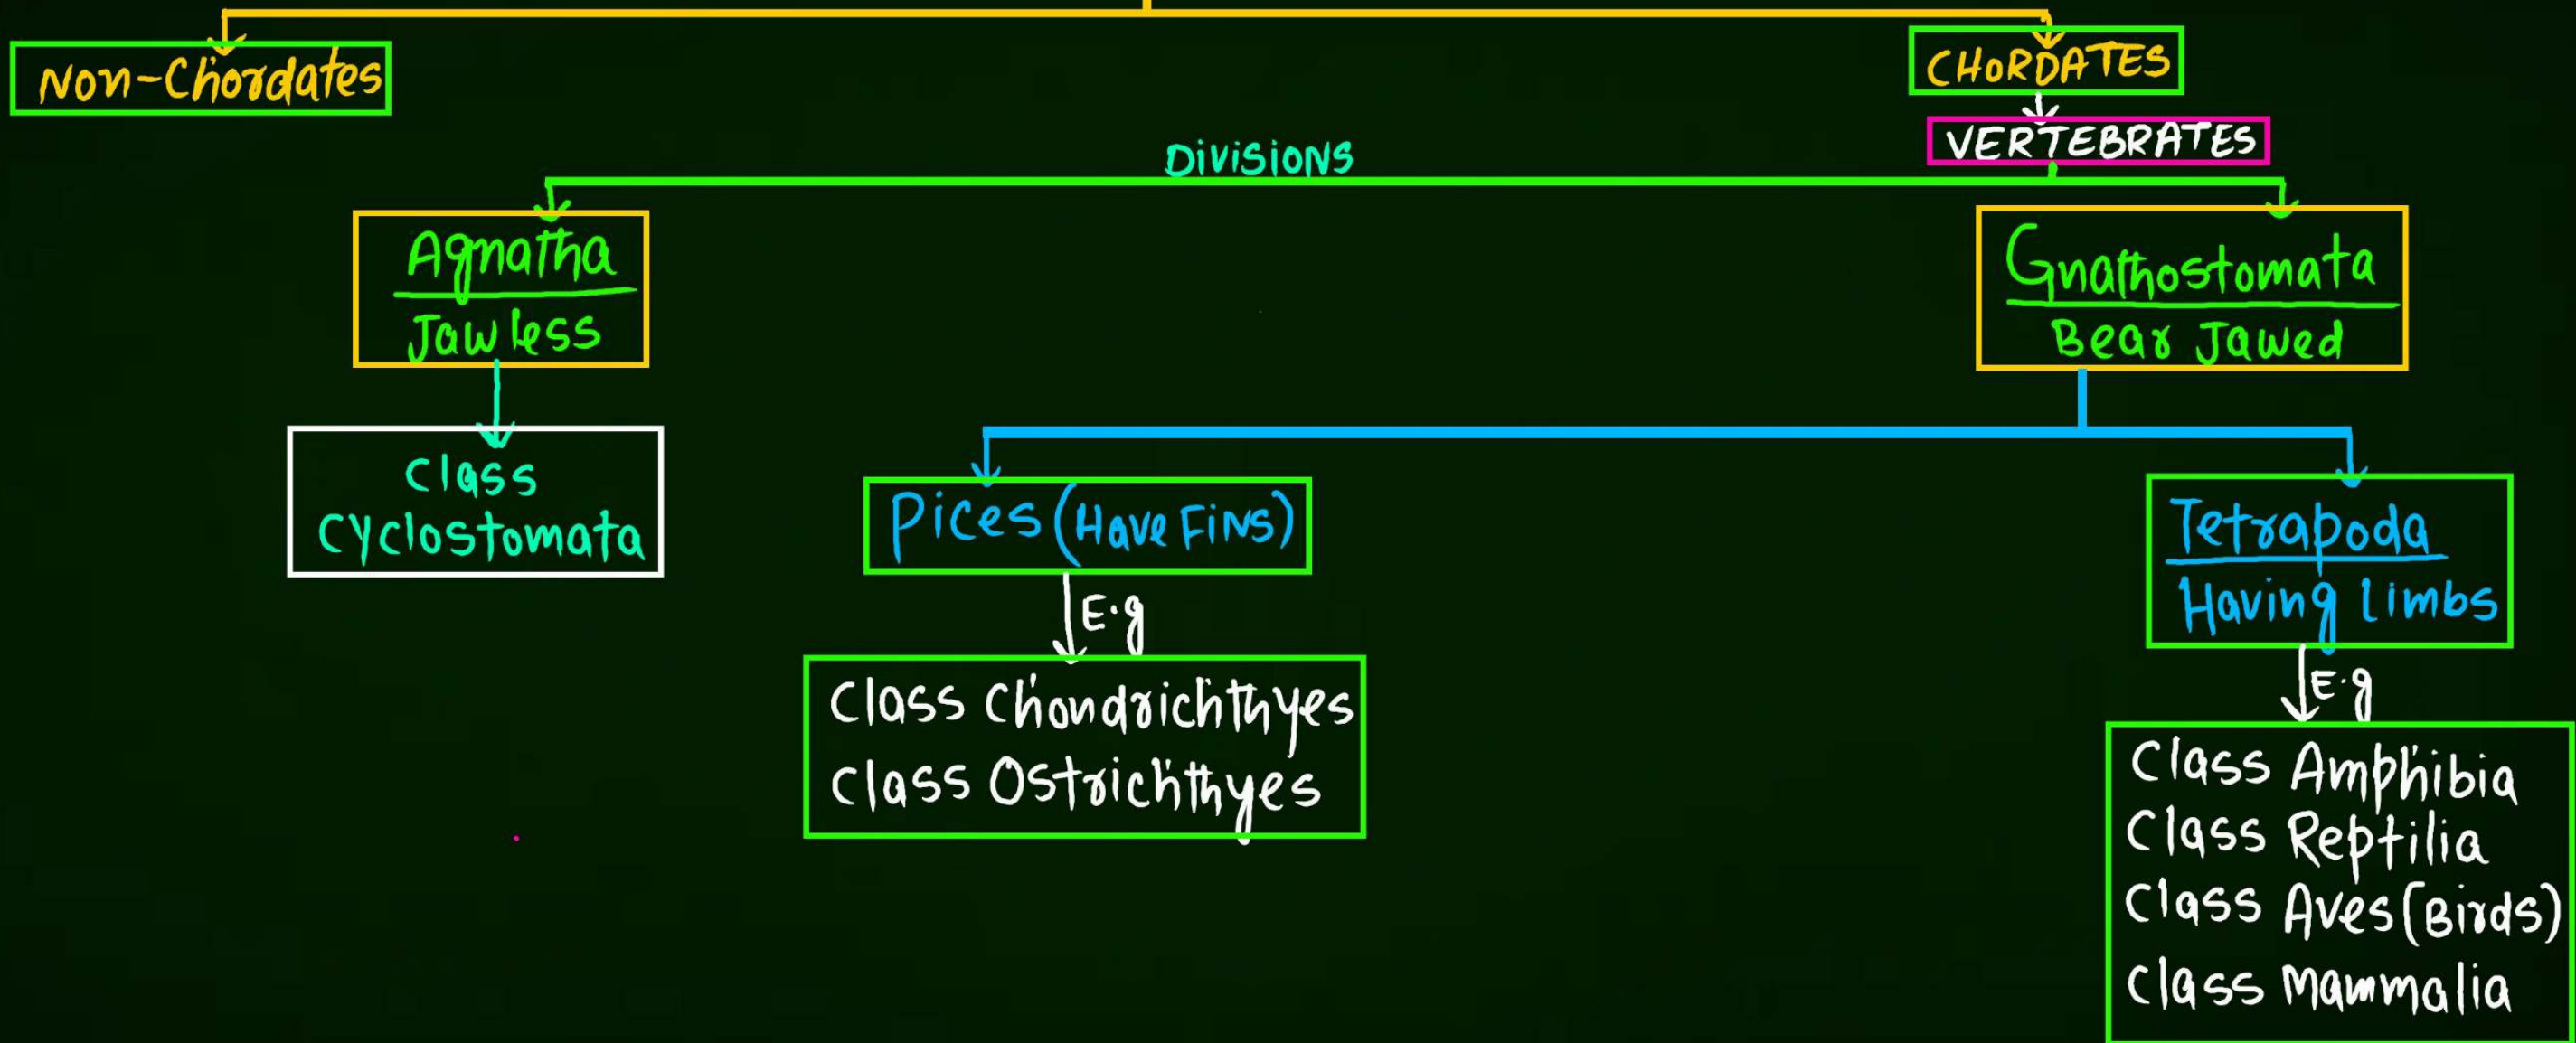

Topics To Be Covered

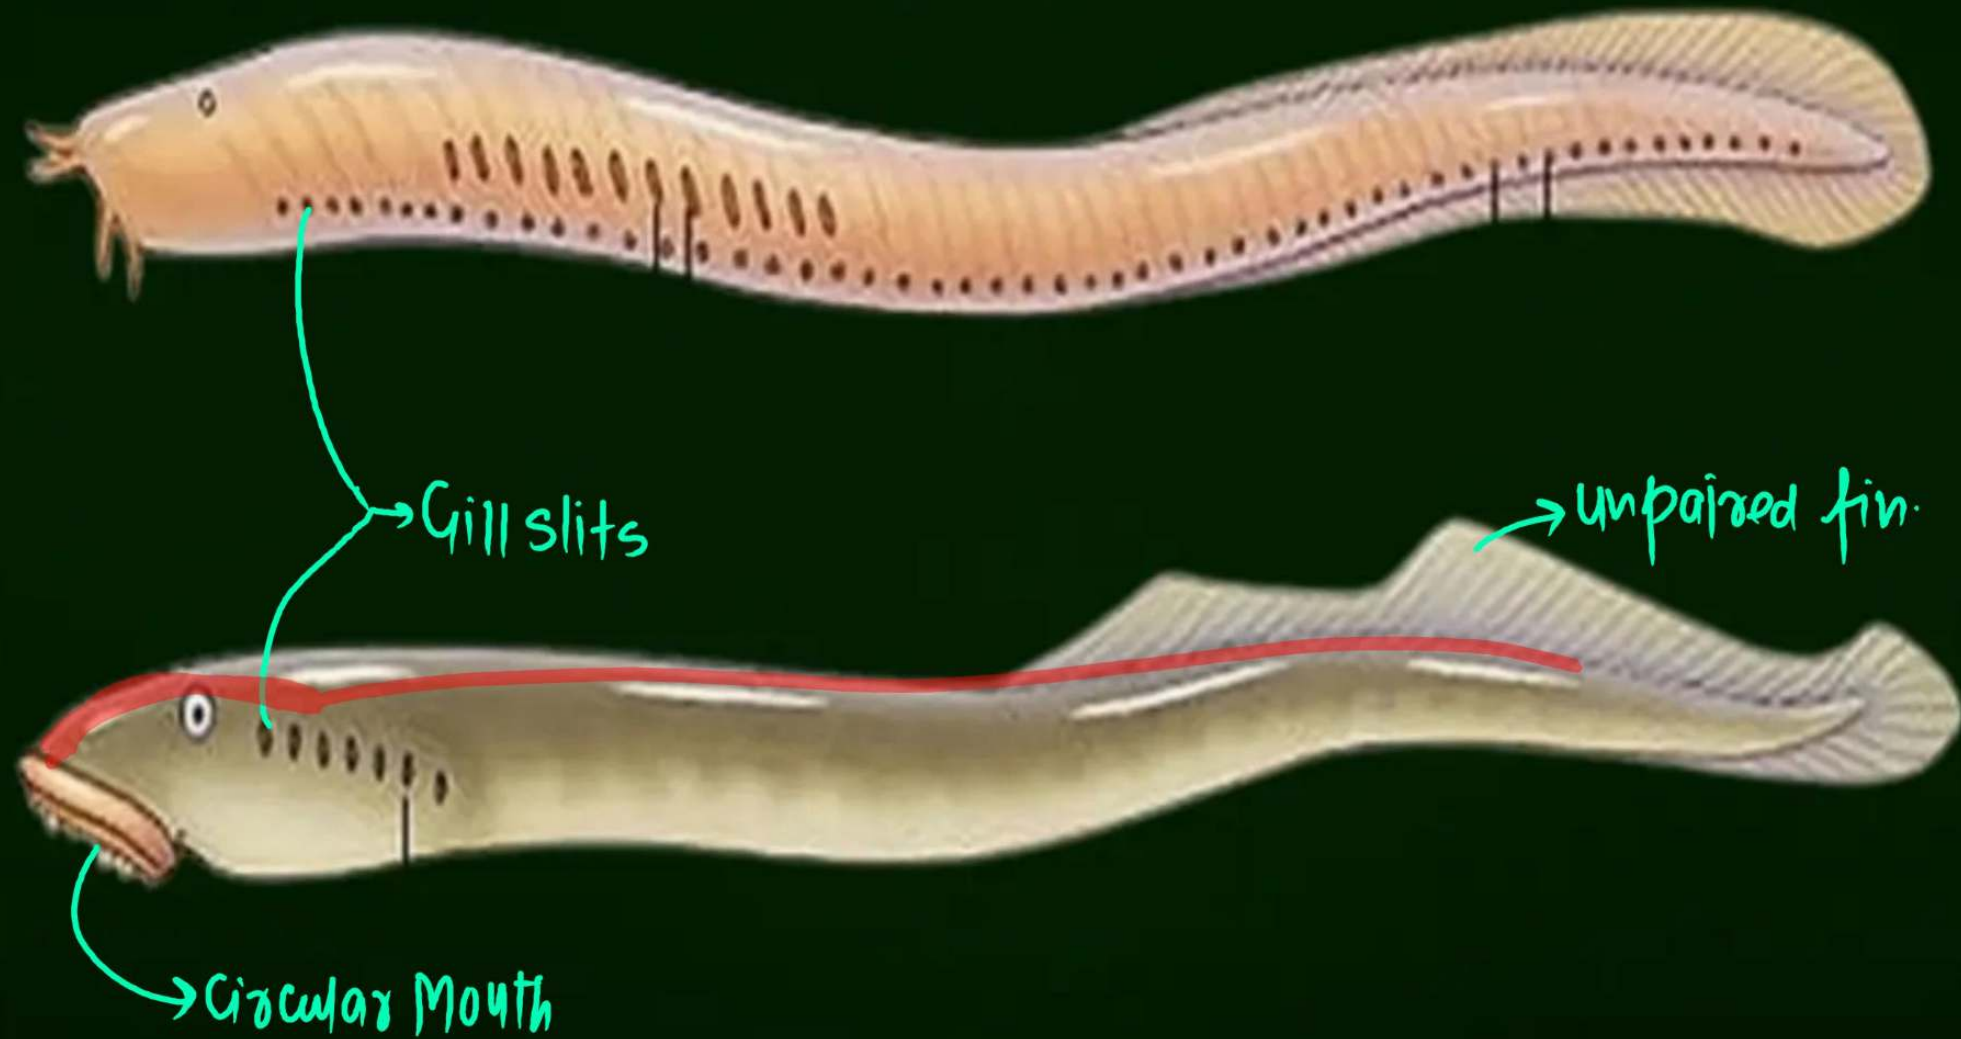

- 1** Phylum Chordata
- A** Class Cyclostomata
- B** Class Chondrichthyes
- C** Class Osteichthyes

Animal Kingdom

Class Cyclostomata (Jawless Suckers)

Class Cyclostomata (Jawless Suckers)

Habitat:- Aquatic (Marine) and are ectoparasites (feed on another large fishes).

Body Design:

- ↳ Having long cylindrical body with no scales & no paired fins on body
- ↳ Circular mouth without jaw and they only without bite
- ↳ they have 6-15 paired gill slits for Respiration.

Skeleton: → Cranium and vertebral column are made of cartilage

Circulatory system: Closed type with two chambered heart (one Atria & one ventricle)

Life Cycle

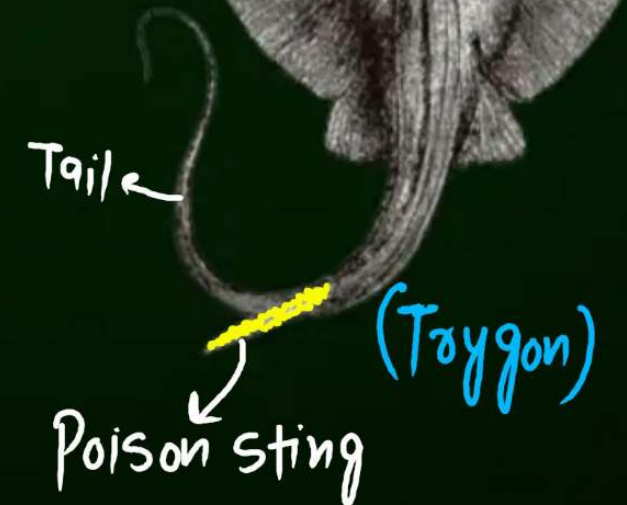

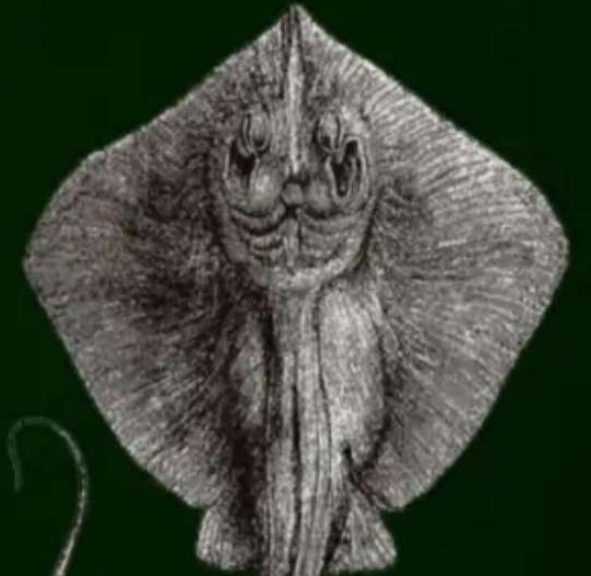

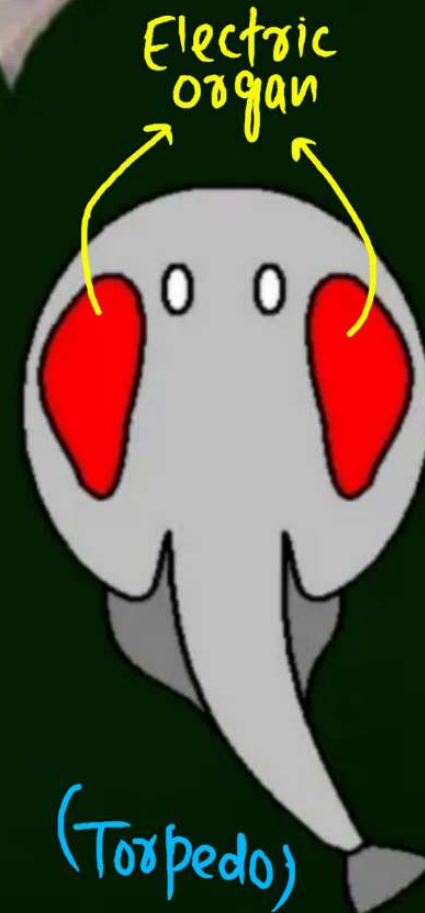

- ↳ Adults migrate from Marine water to freshwater for spawning (To lay egg and sperm), After spawning these adults die and the larvae formed develops into adult and returns back to Marine water.

Examples:

Petromyzon (Lamprey)

Myxine (Hagfish)

Class Chondrichthyes (Cartilage Champs)

Class Chondrichthyes (Cartilage Champs)

Habitat: Aquatic (Exclusively Marine)

Body Design:

- ↳ Streamlined Shape with Rough and tough skin Covered with placoid Scales & Multiple gill slits with no operculum (Gill cover).
- ↳ Mouth is present on ventral side and placoid Scales are modified into backwardly directed teeth

Skeleton: Fully made of cartilage

Notochord: Present throughout the life but its minor part remains as it is

Air bladder: Absent, So they have to swim continuously to stay floating.

Circulatory system: Complete with two chambered heart and are poikilotherms (cold blooded).

Special features:- Have some electric organ (Torpedo) and some have poison sting (Trygon).

Reproduction:- Dioecious, Males have claspers on pelvic fins + Internal fertilization + viviparous or

Examples: Trygon (Sting ray), Scoliodon (Dog fish), Pristis (Saw fish), Carcharodon (Great White Shark) or ovoviviparous.

Kaun Banayga Nabkaar [NEET-2026]

A group of researchers procured some fish-like animals and upon investigation the following characters were observed:

A. Endoskeleton was made of cartilage.

B. Ectoparasitic; as they were found attached on fish skin with their circular sucking mouth.

C. Paired fins and scales were absent, but 7 pairs of gill slits were present.

Which of the following species of animal did they consider to fit best with these characters?

A Exocoetus sp.

B Branchiostoma sp.

C Petromyzon sp.

D Scoliodon sp.

Thank
You
